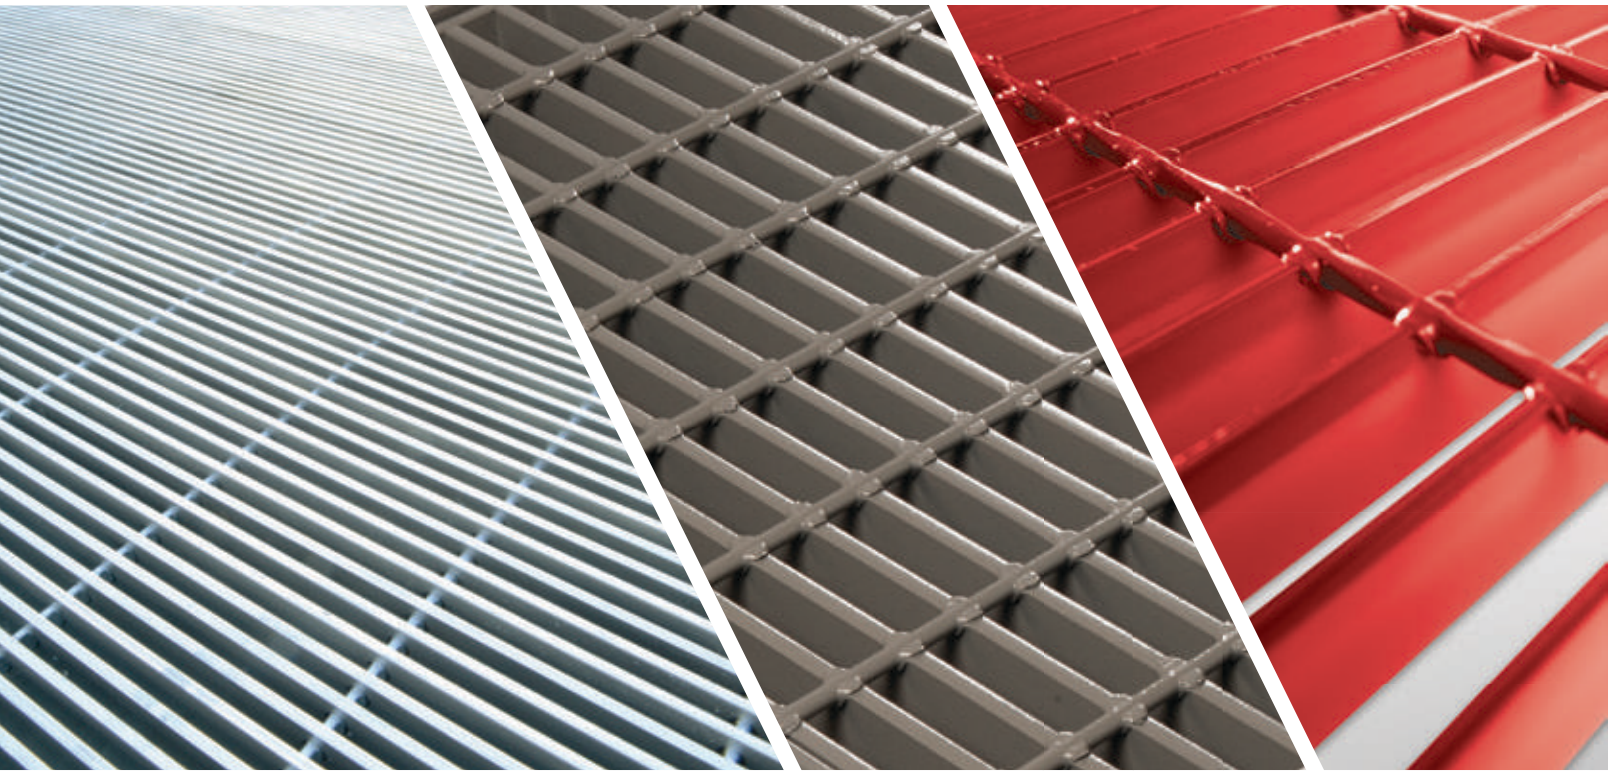
Service. Quality. Reliability.

GRATING PACIFIC

BAR GRATING CATALOG

Welcome



To the Reader

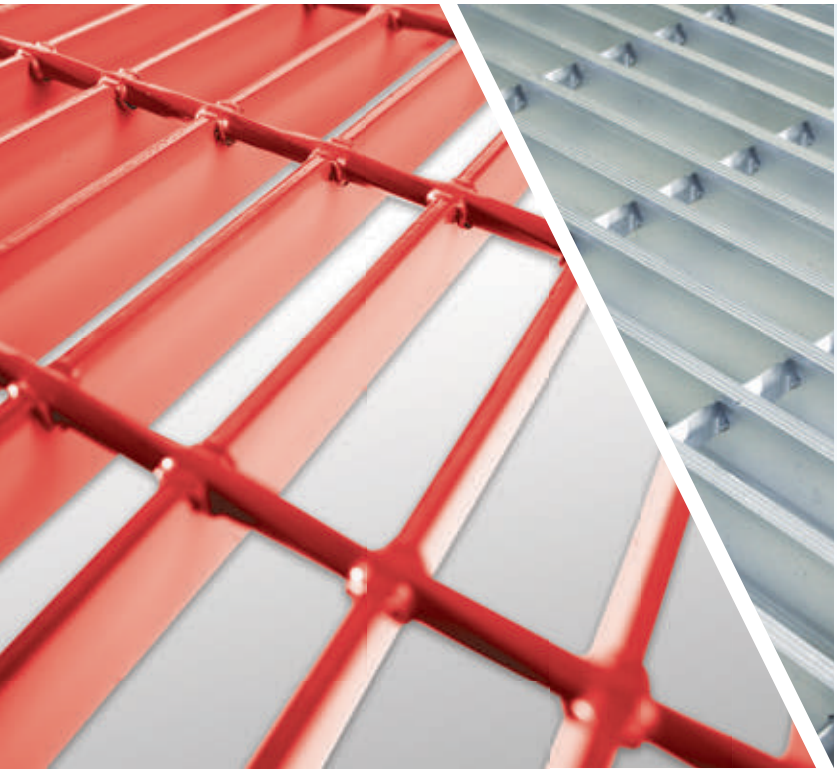
The following presentation of bar grating products has been compiled to serve the diverse needs of design professionals as well as the specific needs of the end user. By describing the extensive line of bar gratings offered by Grating Pacific, this catalog serves as a useful tool for defining materials, methods of assembly, fabrication, and finish alternatives. Whether your needs include only a simple stair and platform or an entire industrial processing facility, the products described in this catalog offer a comprehensive menu of open metal flooring features from which the most appropriate may be selected.

The Bar Grating Advantage

For nearly a century, metal bar grating has been the predominant choice for open metal flooring. Features that make bar grating the preferred product include:

- **Appropriate Materials** – Carbon steel, aluminum, stainless steel, and specialty alloys provide safe, durable, and functional products for nearly all environments.
- **High Percentage of Open Area** – Typically ranging from 50 to 80 percent, allows for the unhindered passage of light, air, and liquids reducing costs for lighting, ventilation, and fire suppression.
- **High Strength-to-Weight Ratio** – Designed for maximum efficiency and capable of supporting loads ranging from light pedestrian traffic to the heaviest vehicular and aircraft loads.
- **Product Flexibility** – Easily fabricated to suit the exact configuration of your application.
- **Economy** – Commonly shop fabricated and finished to meet the specific intricacies of each project. Once delivered to the site and fastened in place the floor is immediately ready for service.
- **Maintenance-Free** – The high percentage of open area allows for excellent drainage and the free passing of debris, thus creating a virtually maintenance-free floor.

Contents



Service. Quality. Reliability.

Founded in 1971 on the unyielding principle of "Service First," Grating Pacific has grown to include five service centers strategically located in the western United States. As our business evolved, it became apparent that unparalleled service also demanded premium quality and steadfast reliability as we partner with our customers to deliver products to an ever expanding market. Each of us at Grating Pacific welcome the opportunity to deliver every aspect of our business with **Service. Quality. Reliability.**

NAAMM

NAAMM – The National Association of Architectural Metal Manufacturers consists of five operating divisions, each focused on specific metal products for building and related applications. Each division develops and maintains technical standards for its products and actively promotes their use by design professionals.

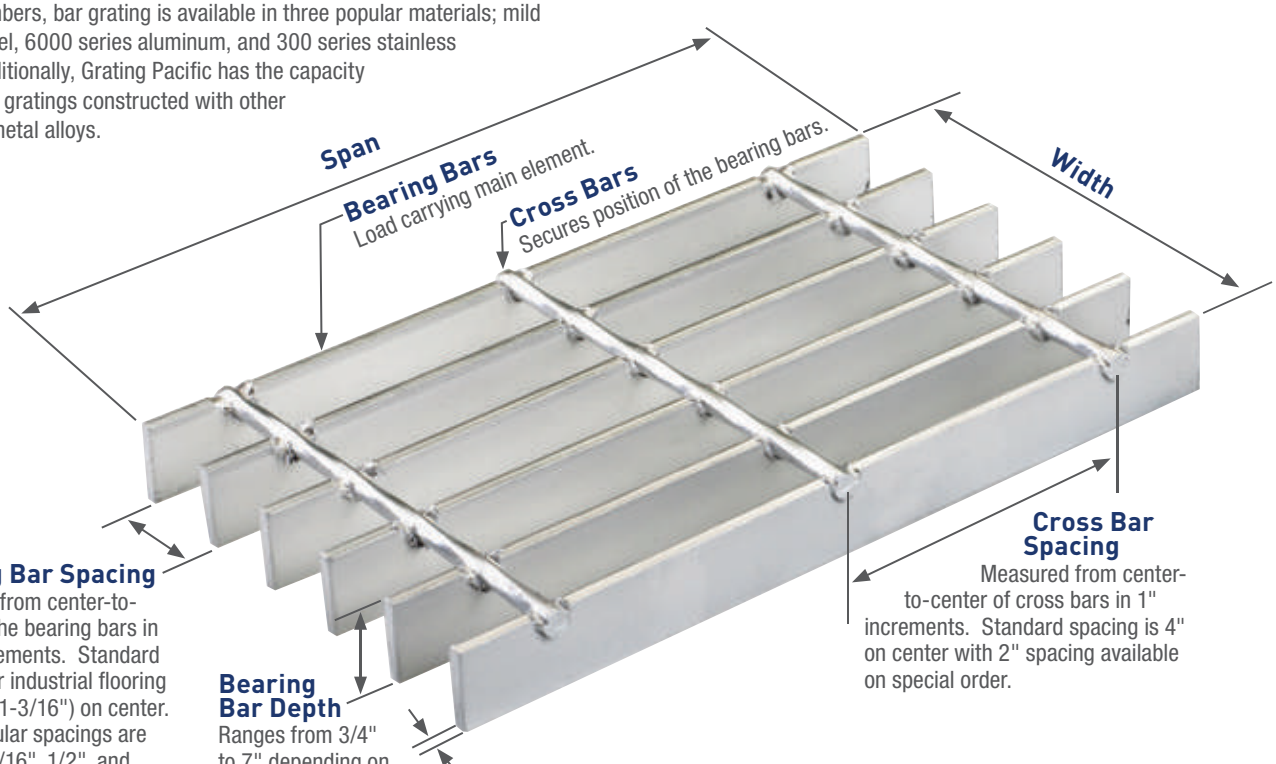
The Metal Bar Grating Division of NAAMM publishes the only manuals for standard and heavy duty gratings which are recognized by ANSI, the American National Standards Institute. These ANSI/NAAMM standards are your guide in assuring that your grating needs are satisfied by products of consistent quality and availability.

Grating Pacific, an active NAAMM member in good standing, designs, manufactures and fabricates bar grating in strict accordance with published NAAMM standards. Supporting engineering documentation is available upon request.

Introduction

Metal Bar Grating is the workhorse of the industrial flooring market and has served industry for decades. Strong and durable with an exceptional strength-to-weight ratio, metal bar grating can be easily fabricated to nearly any configuration. The high percentage of open area makes bar grating practically maintenance-free and all products are fully recyclable.

Manufactured by assembling a series of equally spaced metal bars to connecting cross members, bar grating is available in three popular materials; mild carbon steel, 6000 series aluminum, and 300 series stainless steels. Additionally, Grating Pacific has the capacity to produce gratings constructed with other specialty metal alloys.



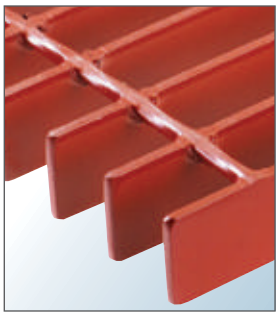
Bearing Bar Spacing
Measured from center-to-center of the bearing bars in 1/16" increments. Standard spacing for industrial flooring is 19/16" (1-3/16") on center. Other popular spacings are 15/16", 11/16", 1/2", and 7/16" on center.

Bearing Bar Depth
Ranges from 3/4" to 7" depending on anticipated loads.

Bearing Bar Thickness
Ranges from 1/8" to 1/2" depending on anticipated loads.

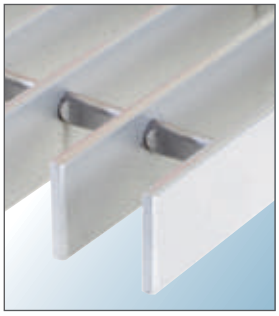
Cross Bar Spacing
Measured from center-to-center of cross bars in 1" increments. Standard spacing is 4" on center with 2" spacing available on special order.

Manufacturing Methods

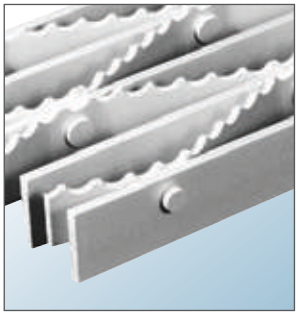


Welded Grating
Economical design ideal for most industrial applications. Manufactured by welding the bearing bar/cross bar intersection, typically with automated forge welding equipment. Available in carbon steel and stainless steel.

Dovetail Pressure Locked Grating
Assembled by inserting pre-punched bearing and cross bars into an "egg-crate" configuration and deforming the cross bars under intense hydraulic pressure. Available in all materials and ideal for architectural and ornamental applications.



Swage Locked Grating
Popular for the manufacture of aluminum, stainless steel, and close mesh gratings. Cross bars are inserted into pre-punched holes in the bearing bars and hydraulically deformed to lock the bars in place.



Riveted Grating
Exceptionally durable grating manufactured by riveting bearing bars and bent connecting bars at their contact points. Excellent for applications involving impact loads and repetitive traffic patterns.

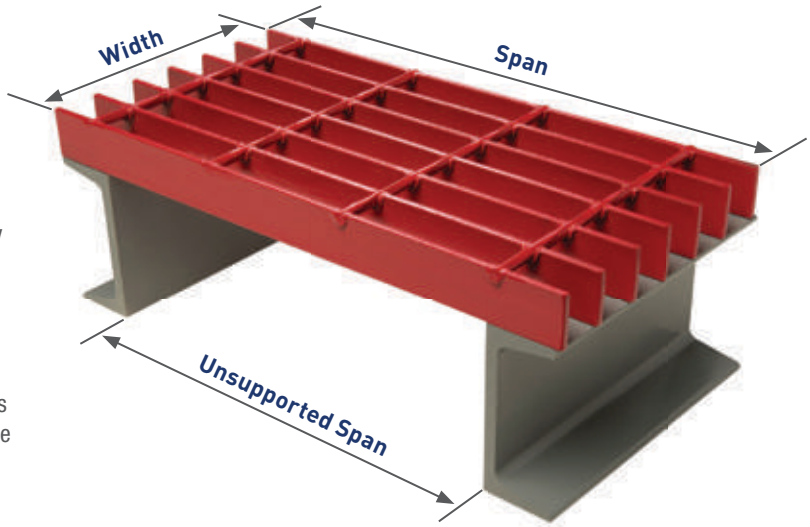
Service Loads

The load tables on the pages within this catalog provide load/deflection criteria for most common applications. These tables provide a concise reference allowing the specifying authority to select the appropriate bearing bar size and spacing for the intended application.

Pedestrian loads are commonly analyzed with uniform and concentrated loads. For pedestrian comfort, deflection is typically limited to 1/4".

Heavy duty and vehicular load tables are presented for specific load conditions. Heavy duty load tables are presented with deflection limited to the lesser of 1/8" or L/400.

If your application is not addressed by the load tables found in this catalog, please contact Grating Pacific for assistance selecting the product most appropriate for your application.



Specification Criteria

When specifying metal bar grating it is important to consider the following factors:

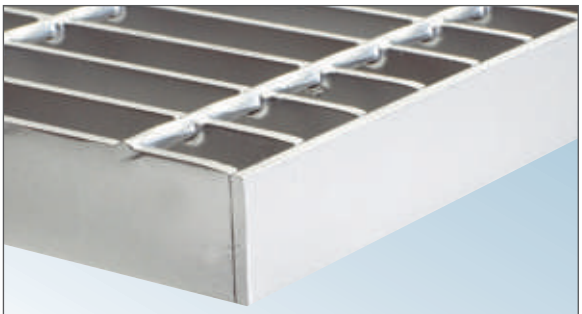
- Service load required and acceptable deflection
- Unsupported clear span
- Flooring surface
- Banding and trim
- Finish

Surface Options

Plain Surface
Standard surface with excellent "self-cleaning" characteristics. Suitable for most applications.

Serrated Surface
Preferred for applications where moisture or fluids cause the walking surface to become wet and slippery.

Algrip™ Surface
Durable slip-resistant deposits on the walking surface provide enhanced slip-resistance for applications in the public way (see page 34).



Banding

The open ends of the grating may be banded to provide additional transverse stiffness and a finished architectural appearance. Achieved by welding a flat bar, similar in size to the bearing bars, to the cut end, banding enhances safety and should always be specified when gratings are designed to be removable.

Banding can reduce impact stress by transferring load to adjacent bearing bars and should always be specified when gratings are subject to vehicular loads. Further banding descriptions and details may be found on page 58.

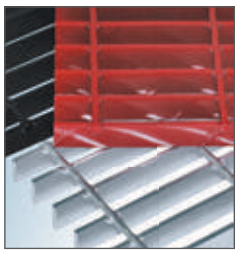
Finishes

Steel products are commonly provided with one of three finishes: bare steel (no finish); painted with one coat of manufacturers red, black or silver paint; or hot dip galvanized in accordance with ASTM A-123.

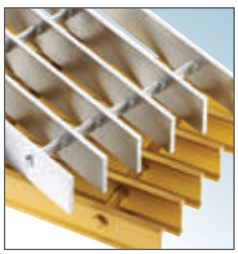
Aluminum products are offered mill finish with optional chemical cleaning or anodizing also available.

Stainless Steel products typically require secondary cleaning due to discoloration that occurs during welding and fabrication. Commercial cleaning, passivation, or abrasive blasting can provide a uniform matte surface while electro-polishing leaves a bright stainless finish.

Other - All products can be provided with specialty finishes including enamel or epoxy paints, or powder coating. When considering specialty finishes, contact Grating Pacific for consultation.



Painted Steel



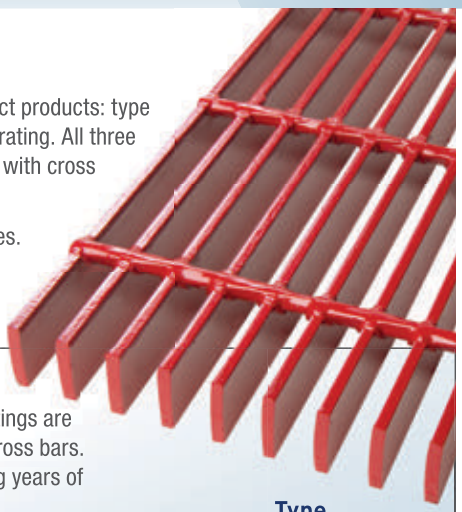
Mill Finished & Anodized Aluminum

Steel Bar Grating

Steel bar grating is manufactured from ASTM A-1011 mild carbon steel and is available in three distinct products: type **"W"** welded bar grating, type **"DT"** dovetail pressure locked grating, and type **"SL"** swage locked grating. All three products are available with bearing bar spacing ranging from 19/16" (1-3/16") to 7/16" on center and with cross bars at either 4" or 2" on center.

Each product has a standard plain surface or may be specified with optional serrated or Algrip surfaces. Finish options include bare steel, painted, hot dip galvanized, or specialty coatings.

The load tables on pages 6-10 provide detailed specification information related to these products.



Type 11-W-4

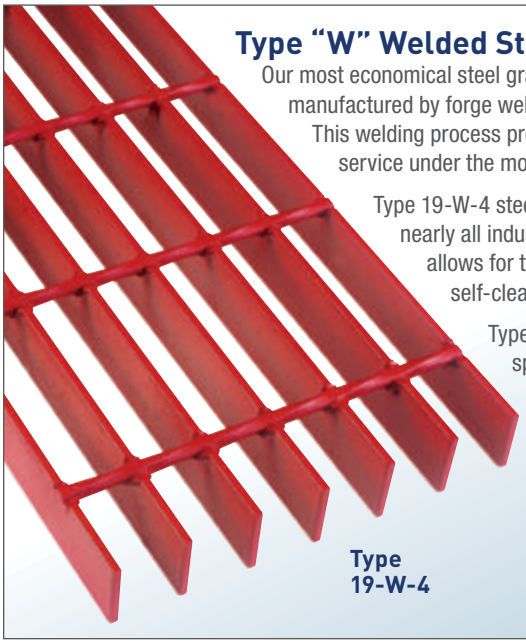
Type "W" Welded Steel Grating

Our most economical steel grating products, type **"W"** welded steel gratings are manufactured by forge welding rectangular bearing bars and drawn cross bars. This welding process provides a positive fused connection providing years of service under the most demanding conditions.

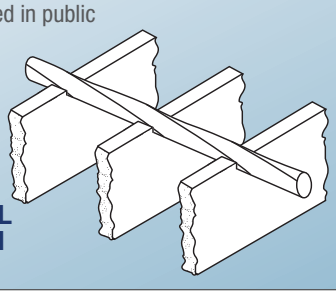
Type 19-W-4 steel grating is our most popular product and is recommended for nearly all industrial flooring applications. With nearly 80% open area, 19-W-4 allows for the easy passage of dirt, debris, snow, and liquids and is essentially self-cleaning.

Type **"W"** gratings are available in close mesh, ADA conforming spacings 11-W-4 and 7-W-4 which are commonly used in public areas.

When specifying type 11-W-4 for ADA applications, 3/16" thick bearing bars must be specified.



Type 19-W-4



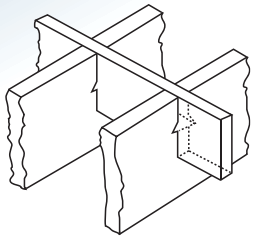
WELDED STEEL INTERSECTION

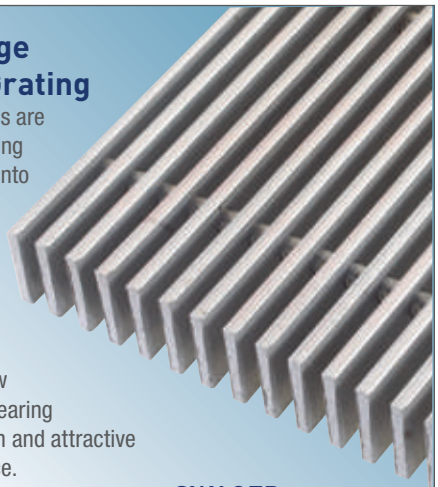
Type "DT" Dovetail Pressure Locked Steel Grating

Type **"DT"** steel gratings have deep rectangular cross bars and are manufactured by inserting pre-punched bearing bars and cross bars into an "egg-crate" configuration and deforming the cross bars under intense hydraulic pressure.

The deep cross bars on type **"DT"** gratings make them popular for architectural applications such as sun shades and infill panels with the deeper cross bar serving as a distinct architectural accent.

DOVETAIL INTERSECTION



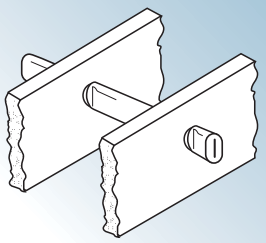


Type "SL" Swage Locked Steel Grating

Type **"SL"** steel gratings are manufactured by inserting hollow tube cross bars into pre-punched holes in the bearing bars. The cross bars are then swaged forming a positive mechanical connection. The cross bars are recessed below the top surface of the bearing bars providing a uniform and attractive architectural appearance.

Swage locking is a particularly efficient process for the production of close mesh gratings. Type 7-SL-4 with 3/16" thick bearing bars provides a net 1/4" clear opening between the bearing bars. This narrow opening is often preferred in public areas where concerns of drainage and the presence of high heeled shoes converge.

SWAGED INTERSECTION



Steel Grating Table of Spacings

Part No.	Spacing	Open Area*	
19-W-4 19-DT-4 19-SL-4		78%	Bearing bars spaced at 1-3/16" on center and cross bars at 4" on center. The workhorse of industrial flooring, popular for platforms, catwalks, mezzanines, and stairways.
19-W-2 19-DT-2 19-SL-2		73%	Bearing bars spaced at 1-3/16" on center and cross bars at 2" on center. Excellent for short spans and applications where small wheeled carts continuously cross the grating surface.
15-W-4 15-DT-4 15-SL-4		75%	Bearing bars spaced at 15/16" on center and cross bars at 4" on center. The closer spaced bearing bars increase load capacity by more than 26% when compared to similar gratings produced with bearing bars at 1-3/16" on center.
15-W-2 15-DT-2 15-SL-2		69%	Bearing bars spaced at 15/16" on center and cross bars at 2" on center. The closer spaced bearing bars and cross bars provide additional flooring surface to support pedestrian and wheeled traffic.
11-W-4 11-DT-4 11-SL-4		68%	Bearing bars spaced at 11/16" on center and cross bars at either 4" or 2" on center. Types 11-4 and 11-2 with 3/16" thick bearing bars comply with the spacing requirements of the Americans with Disabilities Act. For ADA installations, specify that the bearing bars span perpendicular to the normal flow of traffic.
11-W-2 11-DT-2 11-SL-2		63%	
8-W-4 8-DT-4 8-SL-4		58%	Bearing bars spaced at 1/2" on center and cross bars at 4" or 2" on center. Types 8-4 and 8-2 comply with ADA spacing requirements. These products are popular for material handling platforms and mezzanines subject to continuous cart and dolly traffic.
8-W-2 8-DT-2 8-SL-2		54%	
7-W-4 7-DT-4 7-SL-4		53%	Bearing bars spaced at 7/16" on center and cross bars at 4" or 2" on center. Types 7-4 and 7-2 comply with ADA spacing requirements and are popular for applications in the public way. When specified with 3/16" thick bearing bars, 7-4 and 7-2 gratings have a net 1/4" clear opening between the bearing bars and commonly reject intrusion by high heeled shoes.
7-W-2 7-DT-2 7-SL-2		49%	

* Percentage of open area is based upon 3/16" thick bearing bars and .275" cross bars. Contact Grating Pacific if exact open area calculation is required for alternative bearing bar thicknesses or cross bar sizes.

How to Specify Steel Bar Grating

1. Select type of grating
   - **"W"** for welded steel grating
   - **"DT"** for dovetail pressure locked grating
   - **"SL"** for swage locked grating
2. Select bar spacing from table above
3. Select bearing bar size (consult load tables on pages 6-10 considering service loads and clear spans)
4. Specify plain, serrated, or Algrip surface
5. Specify banding or additional trim required
6. Specify finish
   - Bare steel (no finish)
   - Painted (red, black, silver, other)
   - Hot dip galvanized (per ASTM A-123)
   - Other
7. Specify fasteners (if required) – see page 59

19 Space
(1-3/16") Load Table

Use this table when evaluating spans and loads for the following types of steel grating:
19-W-4, 19-W-2, 19-DT-4, 19-DT-2, 19-SL-4, & 19-SL-2

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 18,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 19-W-4 grating. Add .60 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24", 36" and 48" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

Number of Bearing Bars	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 18,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 15-W-4 grating. Add .60 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

Number of Bearing Bars	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Panel Width	1-1/8"	2-1/16"	3"	3-15/16"	4-7/8"	5-13/16"	6-3/4"	7-11/16"	8-5/8"	9-9/16"	10-1/2"	11-7/16"	12-3/8"	13-5/16"	14-1/4"
Number of Bearing Bars	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
Panel Width	15-3/16"	16-1/8"	17-1/16"	18"	18-15/16"	19-7/8"	20-13/16"	21-3/4"	22-11/16"	23-5/8"	24-9/16"	25-1/2"	26-7/16"	27-3/8"	28-5/16"
Number of Bearing Bars	32	33	34	35	36	37	38	39							
Panel Width	29-1/4"	30-3/16"	31-1/8"	32-1/16"	33"	33-15/16"	34-7/8"	35-13/16"							

Panel widths indicated are for gratings with 3/16" thick bearing bars. For 1/8" thick bearing bars deduct 1/16" from the stated values.

Indicates stock panel widths.

11 Space
(11/16") Load Table

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 18,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 11-W-4 grating. Add .60 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 18,000 psi.
The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 7-W-4 grating. Add .60 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Welded grating types 7-W-4 and 7-W-2 are available in bearing bar depths from 3/4" to 1-1/2".

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

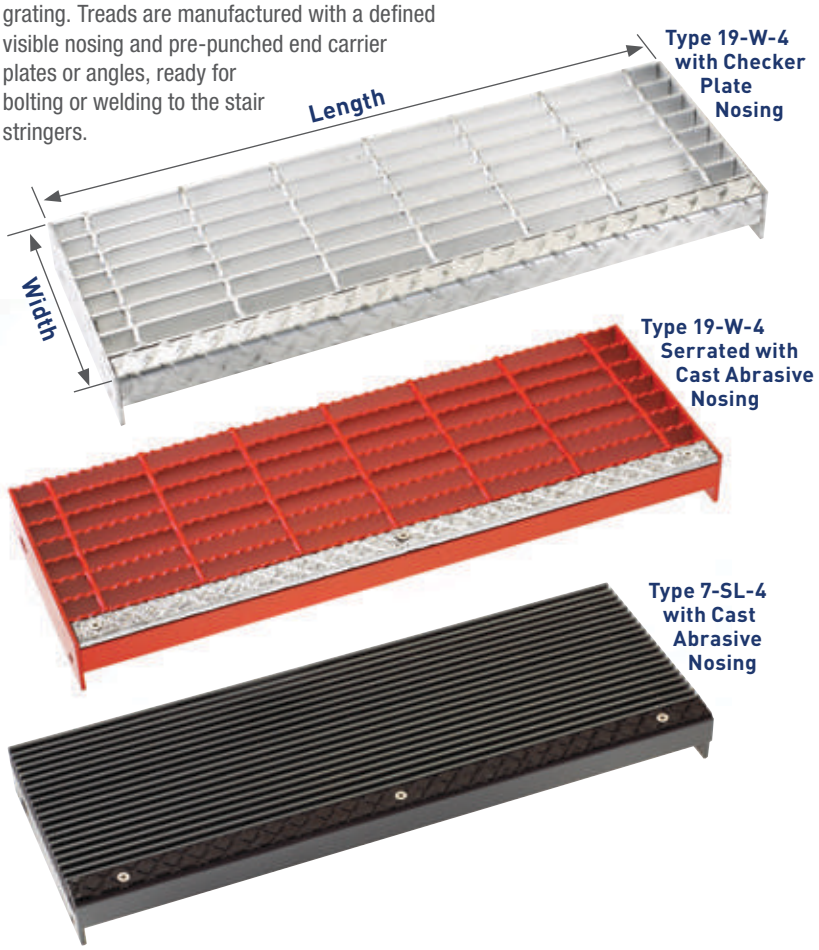
Panel widths indicated are for gratings with 3/16" thick bearing bars. For 1/8" thick bearing bars deduct 1/16" from the stated values.

Indicates stock panel widths.

Steel Stair Treads

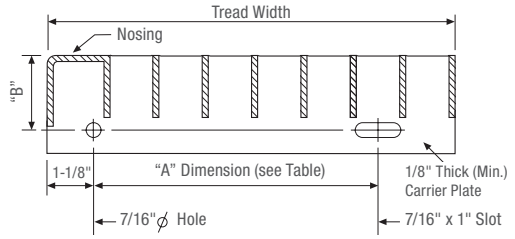
Steel grating stair treads are available fabricated to any size in type **"W"** welded, type **"DT"** dovetail pressure locked, or type **"SL"** swage locked grating. Treads are manufactured with a defined visible nosing and pre-punched end carrier plates or angles, ready for bolting or welding to the stair stringers.



Steel Carrier Plates & Angles

Steel Carrier Plates

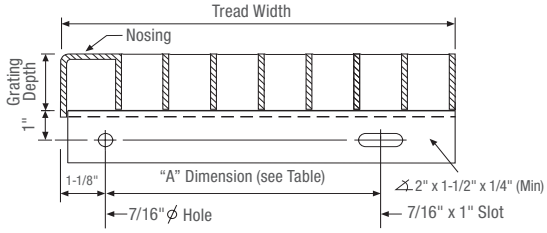
Recommended for use with 19, 15, and 11 spaced gratings



"B" Dimension
1-3/4" for 3/4" thru 1-1/4" bearing bars
2-1/4" for 1-1/2" thru 1-3/4" bearing bars
3-1/4" for 2" thru 2-1/2" bearing bars

Steel Carrier Angles

Recommended for use with 8 and 7 spaced gratings



Nosing Options

Checker plate nosing welded to grating and carrier plates/angles.

Cast abrasive nosing mechanically fastened to welded mounting angle.

Algrip nosing welded to grating and carrier plates/angles.

* For treads up to 5'-6", maximum tread lengths are based upon 300 lb. concentrated load on the front 5 inches of the tread, at the center of the tread length. When treads exceed 5'-6" in length, design allows for 300 lb. concentrated loads at 1/3 points of tread length. Deflection is limited to the lesser of .250" or 1/240 of tread length in all cases.

Aluminum Bar Grating is lightweight, corrosion resistant, non-sparking, and has an unmatched strength-to-weight ratio. Manufactured from ASTM B221, 6063, or 6061 alloy, aluminum grating is available in four distinct products: type **"SG"** Swaged Rectangular Bar, type **"SGI"** Swaged "I"-bar, type **"SGF"** Swaged Flush-Top, and type **"ADT"** Dovetail Pressure Locked. All four products are available with bearing bar spacing ranging from 19/16" (1-3/16") to 7/16" on center and with cross bars at either 4" or 2" on center.

Aluminum products are typically shipped "mill finish" with no additional treatment. For architectural applications or highly corrosive environments, supplemental anodizing, chemical cleaning, or powder coat finishes are available.

The load tables on pages 14-18 provide detailed specification information relating to all four aluminum products.

Type "SG" Aluminum Grating

The most widely used aluminum grating, type **"SG"** rectangular bar, provides clean, crisp lines. Bearing bars are available with standard plain or optional serrated or Algrip surfaces. The cross bars are fully locked within the bearing bar, slightly below the top surface.

Type **19-SG-4** aluminum grating is the industry recognized standard for industrial applications. With nearly 80% open area, 19-SG-4 spacing is virtually self-cleaning, allowing for the easy passage of dirt, debris, snow, and liquids.

Type **"SG"** gratings are available in close mesh ADA conforming spacings 11-SG-4 and 7-SG-4 which are commonly used in public areas. When specifying type 11-SG-4 for ADA applications, 3/16" thick bearing bars must be designated.

Type "SGI" Aluminum Grating

Manufactured with highly efficient "I" shaped extruded bearing bars, type **"SGI"** aluminum grating carries the same load as 3/16" thick rectangular bar type **"SG"** aluminum grating.

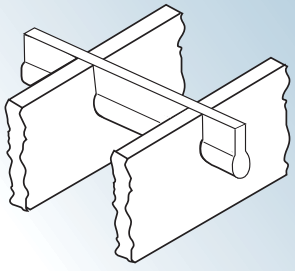
Advantages include reduced weight per square foot and the striated flanges of the "I"-bar provide enhanced skid resistance without the added cost of serration.

Type "SGF" Swaged Flush-Top Aluminum Grating

Manufactured with a unique, extruded cross bar that is flush with the top surface of the bearing bars, type **"SGF"** aluminum grating provides an enhanced walking surface for areas subject to continuous pedestrian traffic.

Available in rectangular bar with plain or serrated surfaces, type **"SGF"** aluminum grating is also available in ADA conforming spacings for applications located in the public way.

Swaged Flush-Top Intersection

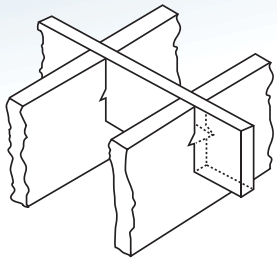


Type "ADT" Aluminum Dovetail Pressure Locked Grating

Type **"ADT"** aluminum gratings have deep rectangular cross bars and are manufactured by inserting pre-punched bearing bars and cross bars into an "egg-crate" configuration and deforming the cross bars under intense hydraulic pressure.

The deep cross bars on type **"ADT"** gratings make them popular for architectural applications such as sun shades and infill panels with the deeper cross bar serving as a distinct visual accent.

Dovetail Intersection



Aluminum Grating Table of Spacings

Part No.	Spacing	Open Area*	
19-SG-4 19-SGI-4 19-SGF-4 19-ADT-4		78%	Bearing bars spaced at 1-3/16" on center and cross bars at 4" on center. The workhorse of industrial flooring, popular for platforms, catwalks, mezzanines, and stairways.
19-SG-2 19-SGI-2 19-SGF-2 19-ADT-2		73%	Bearing bars spaced at 1-3/16" on center and cross bars at 2" on center. Excellent for short spans and applications where additional lateral stability is desired.
15-SG-4 15-SGI-4 15-SGF-4 15-ADT-4		75%	Bearing bars spaced at 15/16" on center and cross bars at 4" on center. The closer spaced bearing bars increase load capacity by more than 26% when compared to similar gratings produced with bearing bars at 1-3/16" on center.
15-SG-2 15-SGI-2 15-SGF-2 15-ADT-2		69%	Bearing bars spaced at 15/16" on center and cross bars at 2" on center. The closer spaced bearing bars and cross bars provide additional flooring surface to support pedestrian and wheeled traffic.
11-SG-4 11-SGI-4 11-SGF-4 11-ADT-4		68%	Bearing bars spaced at 11/16" on center and cross bars at either 4" or 2" on center. Types 11-4 and 11-2 with 3/16" thick bearing bars comply with the spacing requirements of the Americans with Disabilities Act. For ADA installations, specify that the bearing bars span perpendicular to the normal flow of traffic.
11-SG-2 11-SGI-2 11-SGF-2 11-ADT-2		63%	
8-SG-4 8-SGI-4 8-SGF-4 8-ADT-4		58%	Bearing bars spaced at 1/2" on center and cross bars at 4" or 2" on center. Types 8-4 and 8-2 comply with ADA spacing requirements. These products are popular for material handling platforms and mezzanines subject to continuous cart and dolly traffic.
8-SG-2 8-SGI-2 8-SGF-2 8-ADT-2		54%	
7-SG-4 7-SGI-4 7-SGF-4 7-ADT-4		53%	Bearing bars spaced at 7/16" on center and cross bars at 4" or 2" on center. Types 7-4 and 7-2 comply with ADA spacing requirements and are popular for applications in the public way. When specified with 3/16" thick bearing bars, 7-4 and 7-2 gratings have a net 1/4" clear opening between the bearing bars and commonly reject intrusion by high heeled shoes.
7-SG-2 7-SGI-2 7-SGF-2 7-ADT-2		49%	

* Percentage of open area is based upon 3/16" thick bearing bars and .275" cross bars. Contact Grating Pacific if exact open area calculation is required for alternative bearing bar thicknesses or cross bar sizes.

How to Specify Aluminum Bar Grating

1. Select type of grating
   - **"SG"** for swaged rectangular bar grating
   - **"SGI"** for swaged "I"-bar grating
   - **"SGF"** for swaged Flush-Top grating
   - **"ADT"** for aluminum dovetail pressure locked grating
2. Select bar spacing from table above
3. Select bearing bar size (consult load tables on pages 14-18 considering service loads and clear spans)
4. Specify plain, serrated, or Algrip surface
5. Specify banding or additional trim required
6. Specify finish
   - Mill finish (no finish)
   - Anodized (clear, bronze, other)
   - Powder coating
   - Other
7. Specify fasteners (if required) – see page 59

19 Space
(1-3/16") Load Table

Use this table when evaluating spans and loads for the following types of aluminum grating:
19-SG-4, 19-SG-2, 19-SGI-4, 19-SGI-2, 19-SGF-4, 19-SGF-2, 19-ADT-4, & 19-ADT-2

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 12,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/foot of grating width
D = deflection in inches

* Weight per square foot based upon 19-SG-4 grating. Add .30 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

Number of Bearing Bars	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Panel Width	1-3/8"	2-9/16"	3-3/4"	4-15/16"	6-1/8"	7-5/16"	8-1/2"	9-11/16"	10-7/8"	12-1/16"	13-1/4"	14-7/16"	15-5/8"	16-13/16"	18"
Number of Bearing Bars	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
Panel Width	19-3/16"	20-3/8"	21-9/16"	22-3/4"	23-15/16"	25-1/8"	26-5/16"	27-1/2"	28-11/16"	29-7/8"	31-1/16"	32-1/4"	33-7/16"	34-5/8"	35-13/16"

Panel widths indicated are for gratings with 3/16" thick bearing bars. For 1/8" thick bearing bars deduct 1/16" from the stated values. Add 1/4" to all dimensions for extended cross bars on all aluminum products.

Indicates stock panel widths.

Use this table when evaluating spans and loads for the following types of aluminum grating:

15-SG-4, 15-SG-2, 15-SGI-4, 15-SGI-2, 15-SGF-4, 15-SGF-2, 15-ADT-4, & 15-ADT-2

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 12,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/foot of grating width
D = deflection in inches

* Weight per square foot based upon 15-SG-4 grating. Add .30 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 12,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 11-SG-4 grating. Add .30 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 12,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 8-SG-4 grating. Add .30 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

Panel widths indicated are for gratings with 3/16" thick bearing bars. For 1/8" thick bearing bars deduct 1/16" from the stated values. Add 1/4" to all dimensions for extended cross bars on all aluminum products.

Indicates stock panel widths.

7 Space
(7/16") Load Table

Use this table when evaluating spans and loads for the following types of aluminum grating:
7-SG-4, 7-SG-2, 7-SGI-4, 7-SGI-2, 7-SGF-4, 7-SGF-2, 7-ADT-4, & 7-ADT-2

D = deflection in inches

* Weight per square foot based upon 7-SG-4 grating. Add .30 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

Number of Bearing Bars	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

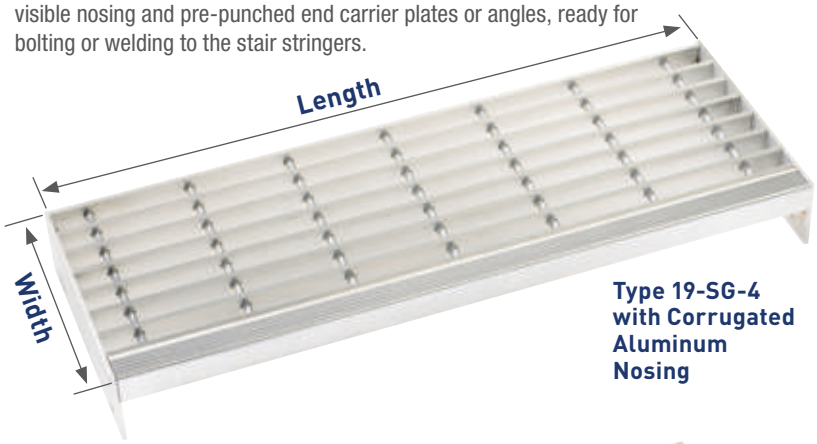
Number of Bearing Bars	77	78	79	80	81	82	83								
Panel Width	33-7/16"	33-7/8"	34-5/16"	34-3/4"	35-3/16"	35-5/8"	36-1/16"								

Panel widths indicated are for gratings with 3/16" thick bearing bars. For 1/8" thick bearing bars deduct 1/16" from the stated values. Add 1/4" to all dimensions for extended cross bars on all aluminum products.

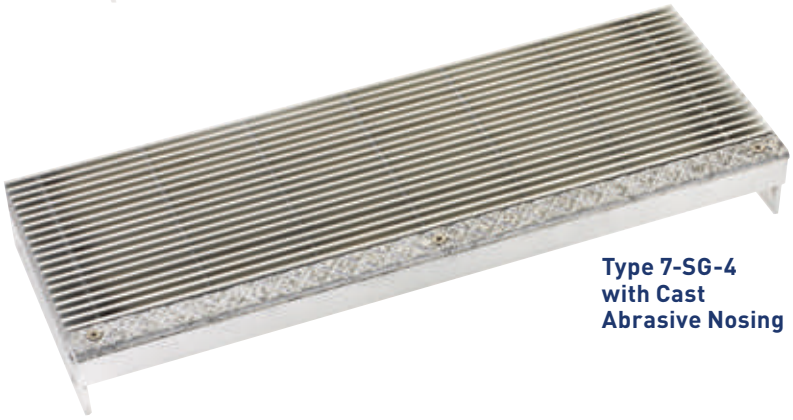
Indicates stock panel widths.

Aluminum Stair Treads

Aluminum stair treads are available fabricated to any size in types **"SG"** and **"SGI"** swage locked, type **"ADT"** aluminum dovetail pressure locked, or type **"SGF"** aluminum flush-top grating. Treads are manufactured with a defined visible nosing and pre-punched end carrier plates or angles, ready for bolting or welding to the stair stringers.



Type 19-SG-4 with Corrugated Aluminum Nosing

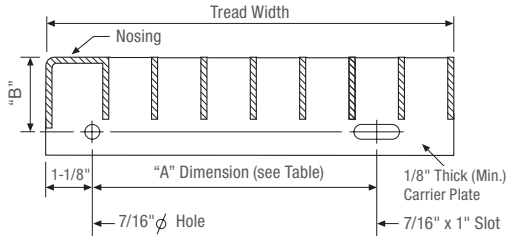


Type 7-SG-4 with Cast Abrasive Nosing

Aluminum Carrier Plates & Angles

Aluminum Carrier Plates

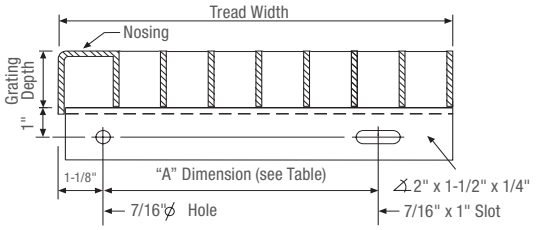
Recommended for use with 19, 15, and 11 spaced gratings



"B" Dimension
2-1/4" for 1" thru 1-3/4" bearing bars
3-1/4" for 2" thru 2-1/2" bearing bars

Aluminum Carrier Angles

Recommended for use with 8 and 7 spaced gratings



Nosing Options

Corrugated aluminum nosing welded to grating and carrier plates/angles.

Cast abrasive nosing mechanically fastened to welded mounting angle.

* For treads up to 5'-6", maximum tread lengths are based upon 300 lb. concentrated load on the front 5 inches of the tread, at the center of the tread length. When treads exceed 5'-6" in length, design allows for 300 lb. concentrated loads at 1/3 points of tread length. Deflection is limited to the lesser of .250" or 1/240 of tread length in all cases.

Aluminum Plank

Heavy Duty Rectangular Punched

Aluminum Plank Grating is a structurally sound and cosmetically attractive alternative to bar grating. Extruded in 6" and 2-1/2" wide sections, plank grating is relatively maintenance-free and has no parts to work loose or splinter.

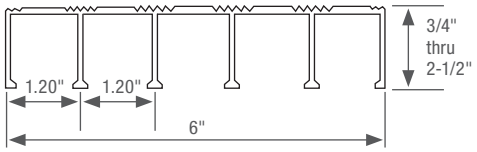
The solid, striated walking surface can be provided "unpunched," which restricts the passage of debris and is preferred for odor containment applications. When the passage of air, light, heat, or moisture is desired, aluminum plank can be punched with a variety of hole patterns including rectangular, square, round, or diagonal. Enhanced slip-resistance is available by specifying "upset" punched square or rectangular patterns.

Solid "Unpunched" Aluminum Plank

Plank Options

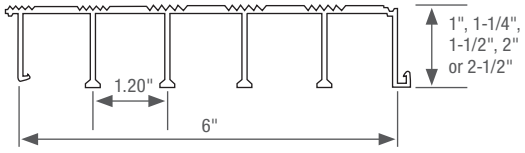
Heavy Duty – Plain Sides

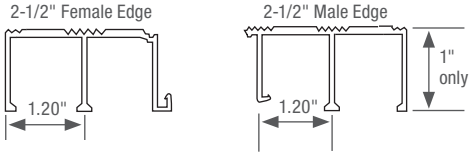
Heavy duty aluminum plank is available with plain sides in depths ranging from 3/4" to 2-1/2".



Heavy Duty – Interlocking

Male-female interlocking heavy duty plank is available in 6" or 2-1/2" widths, 1" deep.





Light Series – Plain Sides

Available in 6" wide, plain side planks only.

Load Tables

Aluminum Plank Grating is available in 20' or 26' stock lengths or fabricated to specified size by Grating Pacific. Individual 6" wide planks can be banded together to form standard panel widths for ease of handling and installation.

When the width of the total area does not result in an overall measurement divisible by six inch sections, the last piece in the run can be shop modified to facilitate a proper fit.

Note: Grating for spans to the left of the heavy line have a deflection of less than 1/4" for uniform loads of 100 lbs./sq. ft. This is the maximum deflection to afford pedestrian comfort and can be exceeded for other types of load at the discretion of the specifiyig authority. The actual Ped (pedestrian) Span under this condition is shown above for each size grating. This grating conforms to MIL-G-18015 (SHIPS).

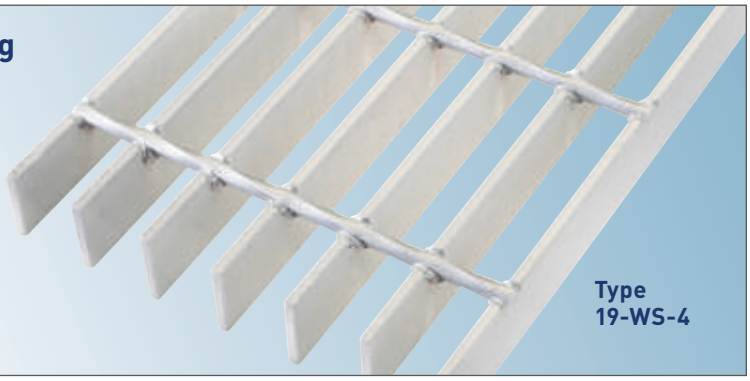
Stainless Steel Bar Grating

Stainless Steel Bar Grating is manufactured from alloy types 304, 304L, 316, or 316L and available in grating types **"WS"** (welded stainless), **"DTS"** (dovetail stainless pressure locked), and **"SLS"** (swage locked stainless). Popular for highly corrosive environments and long-lasting architectural applications, stainless steel bar gratings are available with bearing bar spacing ranging from 19/16" (1-3/16") to 7/16" on center and with cross bars at 4" or 2" on center. Each product is available with standard plain or optional serrated or Algrip surfaces. Finish options are diverse and should be carefully considered.

Type "WS" Welded Stainless Steel Grating

Our strongest and most economical stainless product, type **"WS"** gratings are manufactured by forge welding rectangular bearing bars and drawn cross bars. This welding process provides a positive fused intersection providing years of service under the most demanding conditions.

Type **"WS"** stainless gratings are available in "19 space" (1-3/16"), "15 space" (15/16") and "11 space" (11/16") bearing bar centers. Standard cross bar spacing is 4" on center and the optional 2" cross bar spacing is also available.



Type 19-WS-4

Type "DTS" Dovetail Pressure Locked Stainless

Manufactured with a deep rectangular cross bar, type **"DTS"** dovetail stainless grating is commonly preferred for architectural applications. Sunscreens, grilles and infill panels are just some of the applications where this distinct "egg-crate" configuration is the ideal accent.

Type **"DTS"** stainless gratings are available with bearing bar spacings ranging from 19/16" (1-3/16") to 7/16" on center.

For applications where increased bearing bar spacing is desired, consider the architectural products presented on page 57 of this catalog.

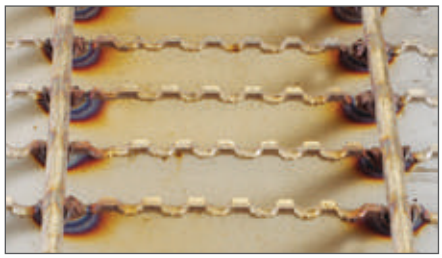
Type "SLS" Swage Locked Stainless

Hollow tube cross bars are hydraulically swaged into pre-punched holes in the bearing bars to make type **"SLS"** swage locked stainless grating. This type of construction provides a secure bearing bar/cross bar intersection and products are available with bearing bar spacings ranging from 19/16" (1-3/16") to 7/16" on center.

This attractive grating, with the swaged cross bars slightly below the top surface of the grating, is very popular for "close-mesh", ADA conforming applications. Consider "11 space" or "7 space" gratings for vault covers or entrance mats located in the public way.

Stainless Steel Finishes

As produced, stainless steel products typically display discoloration caused by the introduction of heat during welding, cutting, or grinding processes. If appearance is important to your application, consideration should be given to secondary cleaning or electro-polishing.



Mill Finish – Products will display discoloration from welding, cutting, and grinding. Satisfactory for industrial or process applications where appearance is not a consideration.

Commercial Clean – A uniform, matte finish is achieved by abrasive blasting followed by passivation to remove manufacturing contaminants.

Electro-Polished – A bright, chrome-like appearance achieved by immersion in chemicals that clean and "polish" the base metal.

Stainless Steel Grating Table of Spacings

Part No.	Spacing	Open Area*	
19-WS-4 19-DTS-4 19-SLS-4		78%	Bearing bars spaced at 1-3/16" on center and cross bars at 4" on center. The workhorse of industrial flooring, popular for platforms, catwalks, mezzanines and stairways.
19-WS-2 19-DTS-2 19-SLS-2		73%	Bearing bars spaced at 1-3/16" on center and cross bars at 2" on center. Excellent for short spans and applications where small wheeled carts continuously cross the grating surface.
15-WS-4 15-DTS-4 15-SLS-4		75%	Bearing bars spaced at 15/16" on center and cross bars at 4" on center. The closer spaced bearing bars increase load capacity by more than 26% when compared to similar gratings produced with bearing bars a 1-3/16" on center.
15-WS-2 15-DTS-2 15-SLS-2		69%	Bearing bars spaced at 15/16" on center and close spaced cross bars at 2" on center. The closer spaced bearing bars and cross bars provide additional flooring surface to support pedestrian and wheeled traffic.
11-WS-4 11-DTS-4 11-SLS-4		68%	Bearing bars spaced at 11/16" on center and cross bars at either 4" or 2" on center. Types 11-4 and 11-2 with 3/16" thick bearing bars comply with the spacing requirements of the Americans with Disabilities Act. For ADA installations, specify that the bearing bars span perpendicular to the normal flow of traffic.
11-WS-2 11-DTS-2 11-SLS-2		63%	
8-DTS-4 8-SLS-4		58%	Bearing bars spaced at 1/2" on center and cross bars at 4" or 2" on center. Types 8-4 and 8-2 comply with ADA spacing requirements. These products are popular for material handling platforms and mezzanines subject to continuous cart and dolly traffic.
8-DTS-2 8-SLS-2		54%	
7-DTS-4 7-SLS-4		53%	Bearing bars spaced at 7/16" on center and cross bars at 4" or 2" on center. Types 7-4 and 7-2 comply with ADA spacing requirements and are popular for applications in the public way. When specified with 3/16" thick bearing bars, 7-4 and 7-2 gratings have a net 1/4" clear opening between the bearing bars and commonly reject intrusion by high heeled shoes.
7-DTS-2 7-SLS-2		49%	

* Percentage of open area is based upon 3/16" thick bearing bars and .275" cross bars. Contact Grating Pacific if exact open area calculation is required for alternative bearing bar thicknesses or cross bar sizes.

How to Specify Stainless Steel Bar Grating

1. Select type of grating
   - **"WS"** for welded stainless steel grating
   - **"DTS"** for dovetail pressure locked stainless steel grating
   - **"SLS"** for swage locked stainless steel grating
2. Select bar spacing from table above
3. Select bearing bar size (consult load tables on pages 24-28 considering service loads and clear spans)
4. Specify plain, serrated, or Algrip surface
5. Specify banding or additional trim required
6. Specify finish
   - Mill finish
   - Abrasive blast
   - Commercial clean
   - Electro-polished
7. Specify fasteners (if required) – see page 59

19 Space
(1-3/16") Load Table

Use this table when evaluating spans and loads for the following types of stainless steel grating:
19-WS-4, 19-WS-2, 19-DTS-4, 19-DTS-2, 19-SLS-4, & 19-SLS-2

Bearing Bar Size (inches)	Approx. Weight psf *	Max. Ped. Span**	Sec. Prop.*** Sx in³ Ix in⁴		Unsupported Span 2'-0	2'-6	3'-0	3'-6	4'-0	4'-6	5'-0	5'-6	6'-0	6'-6	7'-0	8'-0	9'-0

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 20,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 19-WS-4 grating. Add .60 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

Number of Bearing Bars	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Panel Width	1-3/8"	2-9/16"	3-3/4"	4-15/16"	6-1/8"	7-5/16"	8-1/2"	9-11/16"	10-7/8"	12-1/16"	13-1/4"	14-7/16"	15-5/8"	16-13/16"	18"
Number of Bearing Bars	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
Panel Width	19-3/16"	20-3/8"	21-9/16"	22-3/4"	23-15/16"	25-1/8"	26-5/16"	27-1/2"	28-11/16"	29-7/8"	31-1/16"	32-1/4"	33-7/16"	34-5/8"	35-13/16"

Panel widths indicated are for gratings with 3/16" thick bearing bars. For 1/8" thick bearing bars deduct 1/16" from the stated values.

Indicates stock panel widths.

Use this table when evaluating spans and loads for the following types of stainless steel grating:

15-WS-4, 15-WS-2, 15-DTS-4, 15-DTS-2, 15-SLS-4, & 15-SLS-2

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 20,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 15-WS-4 grating. Add .60 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

Number of Bearing Bars	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Panel Width	1-1/8"	2-1/16"	3"	3-15/16"	4-7/8"	5-13/16"	6-3/4"	7-11/16"	8-5/8"	9-9/16"	10-1/2"	11-7/16"	12-3/8"	13-5/16"	14-1/4"
Number of Bearing Bars	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
Panel Width	15-3/16"	16-1/8"	17-1/16"	18"	18-15/16"	19-7/8"	20-13/16"	21-3/4"	22-11/16"	23-5/8"	24-9/16"	25-1/2"	26-7/16"	27-3/8"	28-5/16"
Number of Bearing Bars	32	33	34	35	36	37	38	39

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 20,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 11-WS-4 grating. Add .60 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 20,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 8-SLS-4 grating. Add .30 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 20,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon 7-SLS-4 grating. Add .30 psf for 2" on center cross bars. ** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. (The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.) *** Section properties per foot of width.

Note: When gratings with serrated surface are specified, the depth of the grating required for a specific load will be 1/4" greater than that shown in these tables.

Panel Widths

Grating panels are available from stock in nominal 24" and 36" widths. When considering alternative widths, consult this table to select widths that will maintain uniform "out-to-out" spacing of the bearing bars. Specified widths deviating from this table will be fabricated to size with side banding and the bar spacing on one side of the finished panel will vary from the spacing throughout the remainder of the panel.

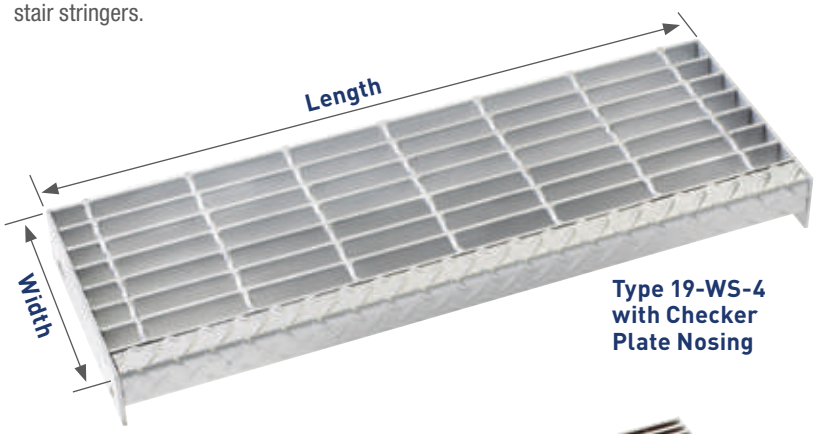
81	35-3/16"
82	35-5/8"
83	36-1/16"

Panel widths indicated are for gratings with 3/16" thick bearing bars. For 1/8" thick bearing bars deduct 1/16" from the stated values.

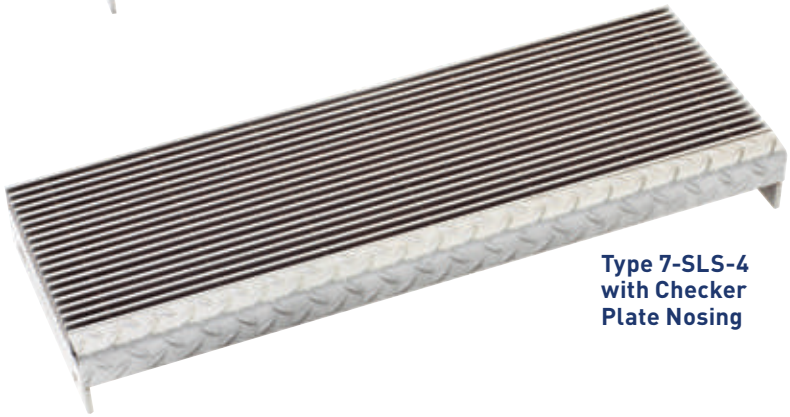
Indicates stock panel widths.

Stainless Steel Stair Treads

Stainless steel stair treads are available fabricated to any size in type **"WS"** welded, type **"DTS"** dovetail pressure locked, or type **"SLS"** swage locked grating. Treads are manufactured with a defined visible nosing and pre-punched end carrier plates or angles, ready for bolting or welding to the stair stringers.



Type 19-WS-4 with Checker Plate Nosing

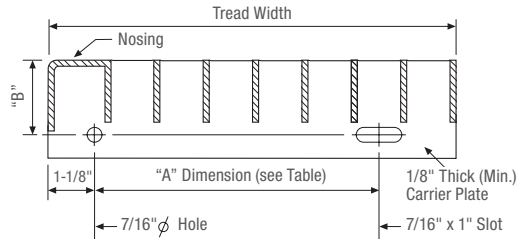


Type 7-SLS-4 with Checker Plate Nosing

Stainless Steel Carrier Plates & Angles

Stainless Steel Carrier Plates

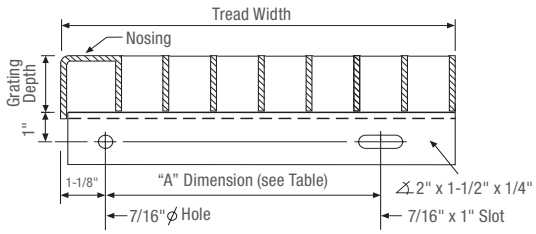
Recommended for use with 19, 15, and 11 spaced gratings



"B" Dimension
1-3/4" for 3/4" thru 1-1/4" bearing bars
2-1/4" for 1-1/2" thru 1-3/4" bearing bars
3-1/4" for 2" thru 2-1/2" bearing bars

Stainless Steel Carrier Angles

Recommended for use with 8 and 7 spaced gratings



Nosing Options

Checker plate nosing welded to grating and carrier plates/angles.

Algrip nosing welded to grating and carrier plates/agles.

* For treads up to 5'-6", maximum tread lengths are based upon 300 lb. concentrated load on the front 5 inches of the tread, at the center of the tread length. When treads exceed 5'-6" in length, design allows for 300 lb. concentrated loads at 1/3 points of tread length. Deflection is limited to the lesser of .250" or 1/240 of tread length in all cases.

Riveted Grating

Riveted Gratings are manufactured by cold-press riveting straight bearing bars to crimped rectangular flat bars. The oldest form of grating, riveted products offer superior resistance to impact, fatigue and repetitive loads.

Materials

Riveted gratings are available in carbon steel, 6000 series aluminum, and 300 series stainless steels. These products are manufactured with bearing bars spaced either 1-1/8" or 3/4" apart and the standard rivet spacing is 7 inches on center. Optional close rivet spacing of 3-1/2" on center is also available.

Type
18-R-7

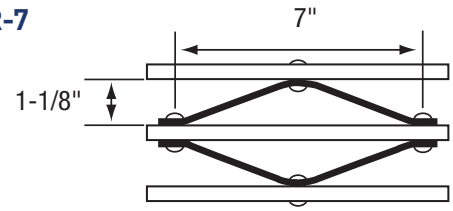
Serrated Surface

The standard method of manufacturing serrated riveted grating is to serrate the crimped cross member. When assembled, these cross members are raised slightly above the top surface of the bearing bars to provide a superior unidirectional slip-resistant surface.

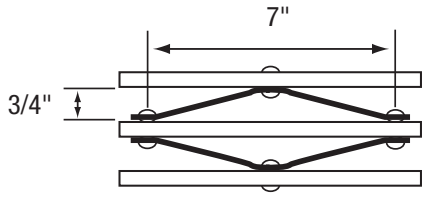
If your application is particularly prone to unsafe walking conditions, consider specifying "100% Serrated" grating where both the bearing bars and cross members are provided with serrations.

Table of Spacings Available

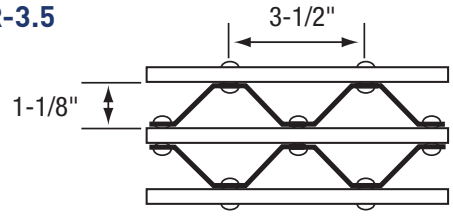
18-R-7



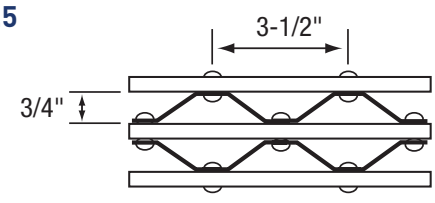
12-R-7



18-R-3.5



12-R-3.5



The part numbers shown above are for carbon steel riveted gratings.
To specify aluminum or stainless steel products, replace the alpha character "R" with "AR" for aluminum products or "SR" for stainless steel products.

Examples:

Type 18-AR-7 for riveted aluminum grating with bearing bars 1-1/8" apart and rivets at 7" on center.
Type 12-SR-7 for stainless steel riveted grating with bearing bars 3/4" apart and rivets at 7" on center.

Use this table when evaluating spans and loads for the following types of steel grating:

18-R-7 and 18-R-3.5

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 18,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon rivets spaced at 7" on center. Add .40 psf for 3-1/2" rivet centers.

** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.

18 Space

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 12,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/foot of grating width
D = deflection in inches

* Weight per square foot based upon rivets spaced at 7" on center. Add .20 psf for 3-1/2" rivet centers.

** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.

Use this table when evaluating spans and loads for the following types of steel grating:

12-R-7 and 12-R-3.5

All loads and deflections are theoretical and based upon the gross sections of the bearing bars, using a fiber stress of 12,000 psi.

The values are not intended to be absolute since the actual load capacity will be affected by the slight variations in mill and manufacturing tolerances.

Grating for spans to the left of the heavy line have a deflection ≤ 1/4" for uniform loads of 100 psf.

U = uniform load in pounds/sq. ft.
C = concentrated load in pounds/ft. of grating width
D = deflection in inches

* Weight per square foot based upon rivets spaced at 7" on center. Add .40 psf for steel products with 3-1/2" rivet centers and .20 psf for aluminum products with 3-1/2" rivet centers.

** Maximum pedestrian load is defined as a 100# uniform load with deflection ≤ 1/4 inch. The 1/4" maximum deflection criteria is considered consistent with pedestrian comfort, but may be exceeded for other loading conditions at the discretion of the specifying authority.

ALGRIP™ Grating & Floor Plate

Workplace Safety

Workplace safety is a must for employers and employees alike. Spiraling costs related to workplace injuries include lost productivity, medical expenses, increased workers compensation insurance premiums, and disability payments. For enhanced safety, all Grating Pacific bar grating products are available with a slip-resistant Algrip walking surface.

When applications require a solid floor, Algrip Slip-Resistant Floor Plate is often a preferred option. Available in carbon steel, stainless steel, and aluminum, these products provide superior performance when compared to diamond floor plate or applied slip-resistant coatings.

Surface Application

The Algrip surface is applied through a patented CNC laser deposition process in which hundreds of rugged, custom alloy, slip-resistant laser deposits are delivered to each square foot of the substrate. This surface can be applied to all materials commonly used to manufacture bar gratings and floor plates.

Slip Resistance & Coefficient of Friction

Slip-resistance is commonly tested in a laboratory setting by measuring for static coefficient of friction (COF) in accordance with ASTM procedure C-1028. This testing procedure assigns a value to the traction surface while that surface is tested under wet and dry conditions. The results of these tests are expressed in numerical values with higher values indicating increased slip-resistance.

The Occupational Safety and Health Administration (OSHA) recommends that walking surfaces maintain a minimum COF of 0.50. The Americans with Disabilities Act (ADA) recommends that level walking surfaces maintain a 0.60 COF and that inclined ramps maintain a more stringent 0.80 COF.

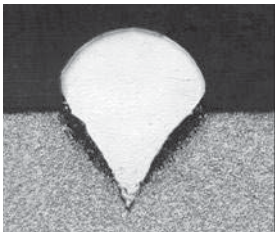
The results indicated in the table to the right demonstrate that Algrip plate and grating products exceed these published guidelines in all conditions.

STATIC COF		
OSHA Guidelines	All surfaces	0.50 COF recommended
ADA Guidelines	Level surfaces Inclined ramps	0.60 COF recommended 0.80 COF recommended
Algrip™ Test Results (ASTM Procedure C-1028-89)	Dry leather Dry rubber Dry neolite	0.88 COF 0.94 COF 0.97 COF
	Wet leather Wet rubber Wet neolite	0.91 COF 0.92 COF 0.96 COF

Durability

The traction providing laser deposits of Algrip have been tested for hardness and adherence by independent testing laboratories. Analysis has measured the hardness of the deposits at up to 60 on the Rockwell C Scale. Under repetitious pedestrian and vehicular traffic, these deposits provide continuous, safe, effective service.

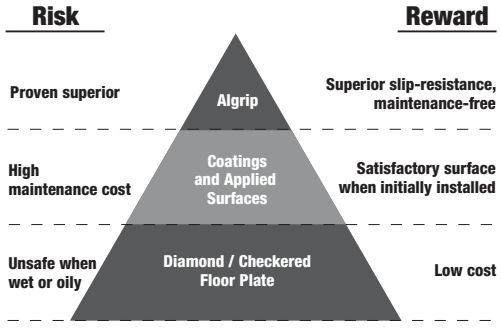
The cross-sectional photograph illustrates the deep penetration of the symmetrical laser deposition into a steel substrate. The deposition penetrates the substrate and is enclosed by a heat affected zone. The resulting bond strength, combined with the proven deposition hardness provides unsurpassed durability regardless of wear or abrasion.



Cross-section of Algrip laser deposition magnified 32 times.

Risk Reward Analysis

When you invest in Algrip, you have selected a superior floor surface that is virtually maintenance-free. Once installed, employees and employers are provided the highest level of protection from slips and falls.



Algrip Slip-Resistant Grating & Stair Treads

All Grating Pacific bar grating products are offered with the premium Algrip slip-resistant surface. Type **"W"** welded carbon steel or stainless steel, types **"DT"**, **"SL"** and **"SG"** steel, aluminum or stainless steel products, all available with our full variety of finishes.

How to Specify Grating with Algrip Surface

1. **Specify type of grating:**
   "W" for welded steel
   "SG" for rectangular bar aluminum
   "WS" for welded stainless steel
   "DT" for dovetail steel
   "ADT" for aluminum dovetail
   "DTS" for dovetail stainless steel
   "SL" for swage locked steel
   "SGF" for flush-top aluminum
   "SLS" for swage locked stainless steel
2. **Select bearing bar and cross bar spacings**
   Examples: 19-W-4, 7-SL-4, 15-SG-2, 11-SGF-4, 19-SLS-4, etc.
3. **Specify bearing bar size with Algrip Surface**
   Example: 1-1/4" x 3/16" with Algrip Surface
4. **Specify banding or additional trim**
5. **Specify finish:**
   Bare, painted, hot dip galvanized, anodized, commercial clean, etc.
6. **Specify fasteners** (if required) – see page 59

Sample for Carbon Steel type 19-W-4 welded grating:
Grating and stair treads shall be as manufactured by Grating Pacific, 3651 Sausalito Street, Los Alamitos, CA 90720, (800) 321-4314. Material shall be A-1011 carbon steel, grating type shall be 19-W-4, and bearing bars shall be 1-1/4" x 3/16" with Algrip surface. Grating shall be fabricated with open ends banded and hot dip galvanized after fabrication.

Algrip Slip Resistant Floor Plate

Algrip Slip-Resistant Floor Plates have efficiently served industry for over 40 years. When work areas are subject to the accumulation of moisture, fluids, or lubricants, Algrip is your number one choice. Manufactured in thicknesses from 14 gauge to 1-1/2", Algrip Floor Plate is designed to serve applications where a solid, safe working surface is essential.

Materials

Types 304 and 316 Stainless Steel – Popular in food processing and clean room environments. Virtually maintenance-free, these products provide unsurpassed slip-resistance in areas subject to the accumulation of moisture or debris. The properties of the stainless steel substrate facilitate compliance with FDA and USDA regulations.

ASTM A-36 and A-1011 Carbon Steel – Easily fabricated by bending, burning, and welding. Carbon steel products can be provided with a mill finish, painted, or hot dip galvanized after fabrication.

ASTM B-221 Aluminum – Available in types 3003 or 5052, aluminum Algrip is light in weight and resistant to atmospheric corrosion. Aluminum products are typically provided mill finish.

For load tables and additional information on Algrip Slip Resistant products visit our website: www.gratingpacific.com

Welded Heavy Duty Gratings are designed to service applications subject to heavy rolling and static loads such as highways, plant floors, loading docks, inlet covers, and airports. Since conditions can range from smaller forklift to large truck or aircraft traffic, heavy duty gratings are manufactured in a wide range of bar sizes and spacings.

Design Criteria

Vehicular loads are designed in conformance with current AASHTO specifications for classifications H-15 through H-25. Automobile and forklift loads are similarly evaluated with loads calculated and distributed in accordance with the "Maximum Traffic Conditions" presented on page 37. If your application is not adequately addressed by these load conditions, please contact our Engineering Department and we will gladly assist in the selection of an appropriate heavy duty grating for your specific need.

Materials & Spacings

Heavy duty gratings are manufactured in carbon steel and 300 series stainless steels. Carbon steel products are available bare (no finish), painted with manufacturers standard paint, or hot dip galvanized.

Stainless steel products are available mill finish, commercially cleaned, or electro-polished.

Below you will find a table of spacings for our most popular products.

Table of Spacings

15-W-4	15/16"		Bearing Bars at 15/16" O.C. Cross Bars at 4" O.C.	**15-W-2**	15/16"		Bearing Bars at 15/16" O.C. Cross Bars at 2" O.C.
19-W-4	1- 3/16"		Bearing Bars at 1-3/16" O.C. Cross Bars at 4" O.C.	**19-W-2**	1- 3/16"		Bearing Bars at 1-3/16" O.C. Cross Bars at 2" O.C.
22-W-4	1-3/8"		Bearing Bars at 1-3/8" O.C. Cross Bars at 4" O.C.	**22-W-2**	1- 3/8"		Bearing Bars at 1-3/8" O.C. Cross Bars at 2" O.C.
30-W-4	1-7/8"		Bearing Bars at 1-7/8" O.C. Cross Bars at 4" O.C.	**30-W-2**	1-7/8"		Bearing Bars at 1-7/8" O.C. Cross Bars at 2" O.C.
38-W-4	2-3/8"		Bearing Bars at 2-3/8" O.C. Cross Bars at 4" O.C.	**38-W-2**	2-3/8"		Bearing Bars at 2-3/8" O.C. Cross Bars at 2" O.C.

Maximum Traffic Conditions		Wheel Load (lbs) (1/2 axle load + 30% impact)	Load Distribution	
			Parallel with Axle	Perpendicular to Axle
 **H-25**	Truck Traffic 40,000 lb. Axle Load Dual Wheels Modified AASHTO H-25	26,000	2 (C)*+ 25"	25"
 **H-20**	Truck Traffic 32,000 lb. Axle Load Dual Wheels Modified AASHTO H-20	20,800	2 (C)*+ 20"	20"
 **H-15**	Truck Traffic 24,000 lb. Axle Load Dual Wheels Modified AASHTO H-15	15,600	2 (C)*+ 15"	15"
 **Automobile**	Automobile Traffic 6,322 lb. Vehicle 3,578 lb. Load 60% Drive Axle Load	3,861	2 (C)*+ 9"	9"
 **5 Ton Forklift**	10,000 lb. Cap. Lift Truck 14,400 lb. Vehicle 24,400 lb. Total Load 85% Drive Axle Load	13,480	2 (C)*+11"	11"
 **3 Ton Forklift**	6,000 lb. Cap. Lift Truck 9,800 lb. Vehicle 15,800 lb. Total Load 85% Drive Axle Load	8,730	2 (C)*+7"	7"
 **1 Ton Forklift**	2,000 lb. Cap. Lift Truck 4,200 lb. Vehicle 6,200 lb. Total Load 85% Drive Axle Load	3,425	2 (C)*+4"	4"

*C = Center-to-center spacing of bearing bars.

Allowable stress – 20,000 psi
Modulus of elasticity – 29,000,000 psi

Bearing Bar Selection

Once the bar spacing is selected, the bearing bar size must be specified based upon the load and unsupported clear span to be served. The tables on pages 38-42 provide the maximum clear span for our most popular products based on the traffic conditions defined on this page. These tables incorporate strict limitations where design deflection shall not exceed the lesser of L/400 or .125" for the spans indicated.

Cross Bar Selection

While bearing bar selection is critical for specifying a proper heavy duty grating, the life cycle of your installation will often be influenced by the selection of the appropriate cross bar. The table below details the variety of cross bar sizes available.

The cross bars listed for Standard Loads are the customary twisted square or round cross bars supplied by Grating Pacific for a particular bearing bar size and spacing. These sizes have been selected to maximize manufacturing efficiency and are best used when the grating is subject to intermittent traffic with occasional full capacity loading.

The cross bars listed for Severe Loads are optional and will provide superior durability when gratings are subject to intense, continuous, or repetitious traffic. Ideal for trench covers, highways, and inlet grates, these cross bars enhance lateral stiffness thereby extending the service life of the grating. When specifying gratings with bearing bars centered at 1-3/8", 1-7/8", or 2-3/8" on center, consideration of Severe Loading cross bars is highly recommended.

Note: In the event that a cross bar size is not specified, the cross bar shall be selected at the discretion of the manufacturer.

Heavy Duty Grating Cross Bars

Bearing Bar Size		BB Centers 15/16", 1-3/16", & 1-3/8"		BB Centers 1-7/8" & 2-3/8"	
Thickness	Depth	Standard Loads	Severe Loads	Standard Loads	Severe Loads
1/4"	1" - 2-1/2"	5/16" Twisted	5/16" Twisted	5/16" Twisted	5/16" Twisted
5/16"	1" - 2-1/2"	5/16" Twisted	5/16" Twisted	5/16" Twisted	5/16" Twisted
3/8"	1" - 2-1/2"	5/16" Twisted	5/16" Twisted	5/16" Twisted	5/16" Twisted
1/4"	3" - 5"	5/16" Twisted	1" x 1/4"	3/8" Round	1" x 1/4"
5/16" - 1/2"	3" - 5"	3/8" Round	1" x 3/8"	7/16" Round	1" x 3/8"
1/4"	5-1/2" - 7"	3/8" Round	1-1/4" x 1/4"	7/16" Round	1-1/4" x 1/4"
5/16" - 1/2"	5-1/2" - 7"	3/8" Round	1-1/4" x 3/8"	7/16" Round	1-1/4" x 3/8"

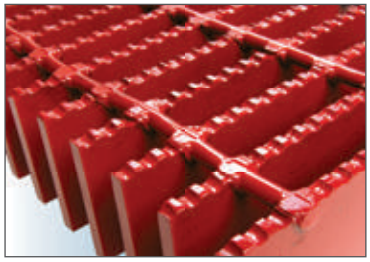
The sizes shown above are listed as minimums. Twisted and round cross bars are typically interchangeable and, unless otherwise specified, may be substituted at the discretion of the manufacturer. In substitution, the cross sectional area of the alternative cross bar shall equal or exceed the minimum size listed above.

Banding

Heavy duty gratings are commonly subjected to shock and impact loads and it is highly recommended that all open ends be banded. The welded band bar helps distribute impact loads and minimizes distortion when subjected to repetitive traffic patterns. Banding details can be found on page 58.

Serrated Surface

Optional serrated bearing bars enhance skid-resistance. Consider this surface for applications subject to the accumulation of liquids or lubricants or inclined installations.



How to Specify Heavy Duty Bar Grating

1. Select type of grating
   - **"W"** for welded steel grating
   - **"WS"** for welded stainless steel grating
2. Select bar spacing from table on page 36
3. Select bearing bar size from tables on pages 38-42
4. Specify cross bar size from selection table above
5. Specify plain or serrated surface
6. Specify banding and any additional trim required
7. Specify finish
   - Bare steel (no finish)
   - Painted (red, black, silver, other)
   - Hot dip galvanized (per ASTM A-123)
   - Other
8. Specify fasteners (if required) – see page 59

Bridge Decking is manufactured by cold-press riveting truss shaped reticuline bars to parallel rectangular bearing bars. The resulting product is an exceptionally durable heavy duty grating with superior stiffness and lateral stability. Bridge Decking is often the preferred heavy duty grating for concentrated or stress applications subject to impact and repetitive loads. Popular applications include bridge floors, highway inlets, and airport trench drain covers.

Loads are theoretical and based upon 20,000 psi unit stress.
Load criteria and distribution is in accordance with the table of Maximum Traffic Conditions found on page 37 of this catalog.
Section properties were developed using the Parallel Axis Theorem for determining centroid and "I" values.

* Add 3/8" for rivet heads protruding outside of bearing bars

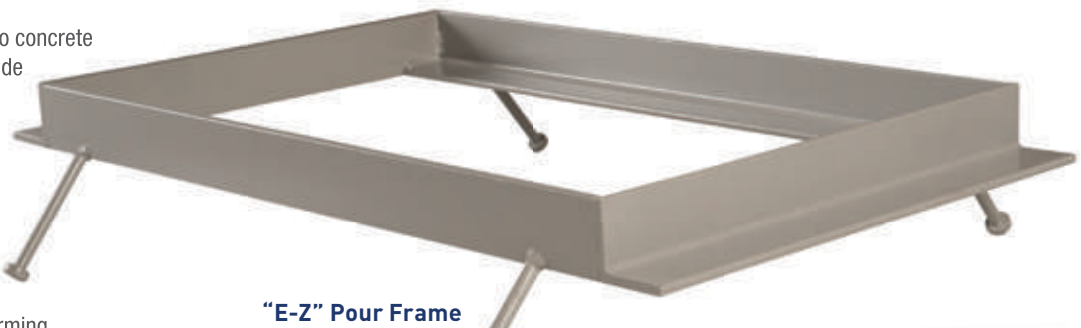
Embed Frames

Embed frames cast into concrete floors and substructures serve a multitude of purposes that extend the effective life of your completed construction project. Frames form a rigid shield for concrete lead edges and perimeters which are subject to cracking and chipping when left unprotected.

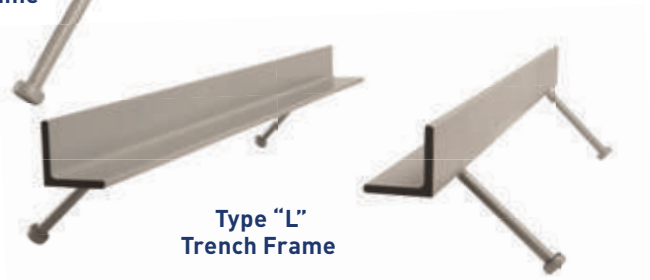
During construction, these rigid (1/4" minimum thickness) frames expedite forming and provide a welded structure that assures accuracy in the concrete pour. Frames provide a uniform bearing surface for the grates or covers, often eliminating rocking or irregular elevations experienced with grates or covers installed directly on poured concrete.

When you specify Grating Pacific embed frames you are specifying durability, accuracy, and economy.

Nail holes are optional and may further expedite installation. If desired, size and location of nail holes shall be indicated.



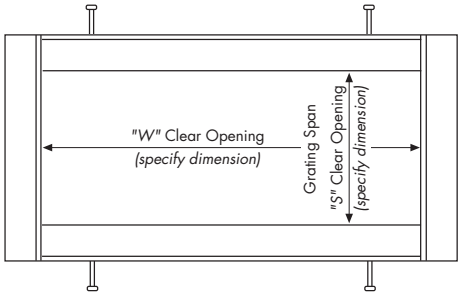
"E-Z" Pour Frame



Type "L" Trench Frame

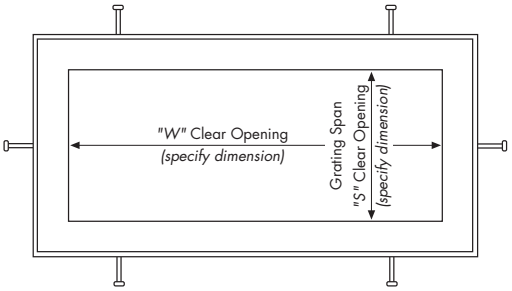
E-Z Pour Frames

Grating Pacific **E-Z Pour** frames are designed to expedite the forming process and provide superior concrete embedment. Assembled with continuous anchors on the non-bearing sides, **E-Z Pour** frames install quickly and provide superior drainage.



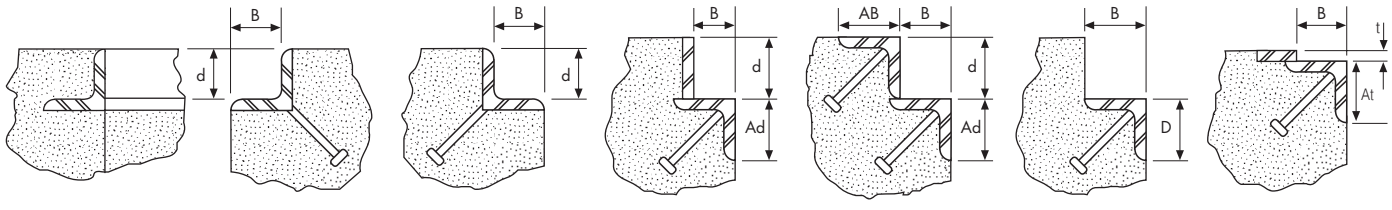
Welded Frames

All frames are available in four sided, one piece, welded construction units that can accommodate any clear opening. Frame sections shown below illustrate the various configurations for edge protection. Simply specify the frame type, desired clear opening ("W" and "S" dimensions), and desired grating or cover thickness.



Frame Sections

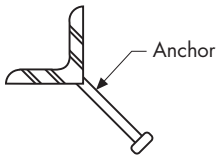
Dimensions indicated in table (page 45)



Type "E-Z" **Type "L"** **Type "Z"** **Type "M"** **Type "X"** **Type "P"**

Anchors

All frames are provided with 3/8" x 4" headed concrete stud anchors welded within 6" of each end and at a maximum of 24" on center. Alternative anchor sizes and spacings may be designated by the specifying authority.



Materials & Finishes

Carbon steel frames are manufactured with one of three standard finishes, bare steel (no finish), painted, or hot dip galvanized after fabrication. Aluminum frames are provided mill finish and can be specified with bituminous coating on surfaces to be cast in concrete. Stainless steel frames are supplied mill finish and can be specified as abrasive blasted after fabrication to provide a uniform matte finish.

Frame Specifications

The following table indicates fabrication dimensions for steel embed frames presented on page 44. Embed frames manufactured from stainless steel or aluminum are similarly available, but will vary dimensionally. Consult Grating Pacific for dimensions if critical.

Trench & Inlet Systems

The combination of Grating Pacific gratings and embed frames provides the specifier with a wide range of alternatives for drainage applications. While any of the bar grating products and embed frames shown on the previous pages can be combined for effective solutions, the trench systems and inlet sets illustrated on pages 46-49 are the most economical solution to drainage requirements.

Custom Sets

If the standard sets described on pages 46-49 do not adequately address your specific application in either load capacity or appearance, please contact our engineering department. We will gladly assist in the selection of an appropriate alternative from our wide range of versatile products.

Trench & Inlet Systems

Grating Pacific Trench and Inlet Systems combine our most popular gratings and embed frames to provide economic, modular components for construction projects. These products are offered in Standard Duty, designed to serve pedestrian loads, and Heavy Duty, designed to service the most demanding vehicular traffic. Each series is offered with multiple bar spacings (shown below) to address the specific needs of your application.

Standard Duty

Type "S"

Designed to support pedestrian loads, type "S" grates are manufactured from welded grating with durable 3/16" (min.) thick bearing bars. Open area of nearly 80% allows for fast clearing of moisture and run-off.

Type "SA"

Standard Duty type "SA" grates are designed to conform with strict ADA spacing requirements. Open area of 68% allows for drainage and ventilation while maintaining a safe traffic surface.

Type "SP"

Type "SP" grates also comply with ADA spacing requirements. Additionally, the 1/4" maximum clear opening between the bearing bars make these grates desirable in areas subject to pedestrian traffic where high heeled shoes are common.

Heavy Duty

Type "H"

Type "H" grates are manufactured from stout, 3/8" (min.) thick bearing bars. Designed to serve the most rigorous truck and forklift loads. With nearly 70% open area, these products are ideal for parking lot and highway drain applications.

Type "HA"

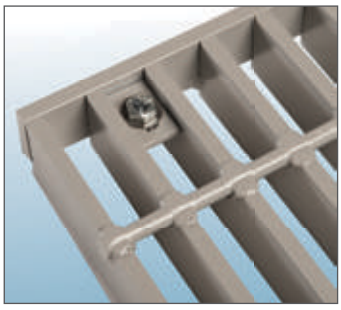
Heavy duty type "HA" grates are similar to type "SA" above with the exception that these grates are additionally designed to support forklift and vehicular loads.

Type "HP"

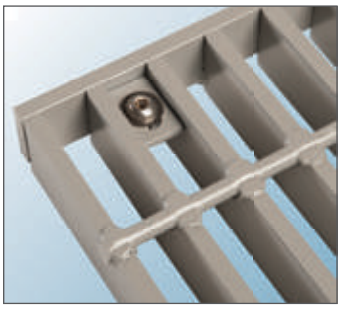
Heavy duty type "HP" grates are similar to type "SP" above with the exception that these grates are additionally designed to support forklift and vehicular loads.

Bolted Grates

Grating Pacific Trench and Inlet Systems are manufactured as component products with the grates easily removed for clearing debris from the trenches or inlets. Often, security concerns or traffic conditions dictate that the grates must be bolted to the framing. When this option is specified, weld lugs or countersunk lands are installed on the grates and the bolt is installed below the traffic surface of the grating. For high security applications, bolted grates with tamper-resistant fasteners may be further specified. Examples are shown below.



Bolted Grates w/ Weld Lug



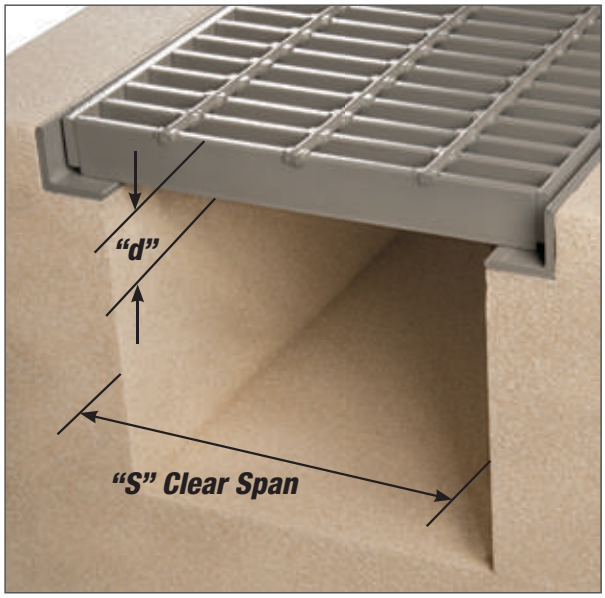
Tamper-Resistant Bolt w/ Weld Lug

Close Mesh Bolting w/ Counter Sunk Land

Trench Grating Systems by Grating Pacific allow the specifier to combine any of the gratings illustrated on the preceding page with any of the embed frames profiled on page 44. Systems are available in Standard Duty for pedestrian loads or Heavy Duty for vehicular traffic. Unlike cast iron or molded trench products, this flexible system allows the user to specify the exact clear opening ("S" dimension) desired. Because Grating Pacific offers five distinct embed frame profiles, the user can select a frame to meet the exact edge condition desired. Bolting the grates to the frames is optional and must be specified.

All gratings are provided with plain surface (the optional serrated surface is available when specified) and open ends are trench banded to maximize drain capacity.

Unless otherwise noted, all trench frames and grating are hot dip galvanized after fabrication in accordance with ASTM Specification A-123. Our most popular systems are listed in the table below.



How to Specify Trench Systems

Trench systems are specified by component model numbers. Simply follow the sample specification below.

TH - 12 - EZ (B)

- *"T" indicates trench grating while "H" indicates type H Heavy Duty grating as shown on page 46. Specify Heavy Duty (type H, HA, or HP), or Standard Duty (type S, SA, or SP).*
- *Indicates trench clear span or "S" dimension in inches.*
- *Indicates type of frame from sections illustrated on page 44.*
- *Optional component to specify bolted grates. If bolted grates are not required, this suffix is omitted.*

Standard Trench Systems

Standard Duty

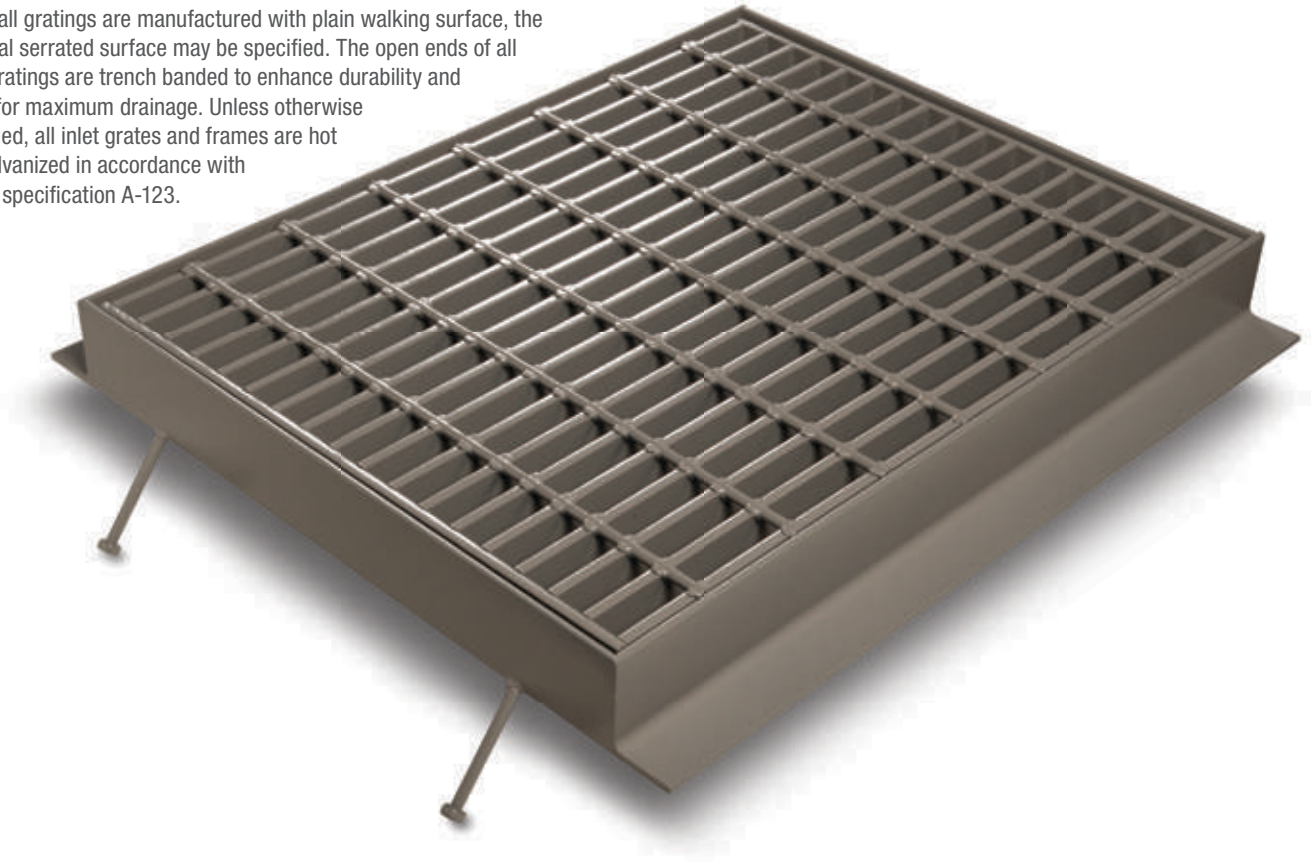
Inlet Grates & Frames

Complementing our trench grating systems, Grating Pacific Inlet Grates and Frames provide the specifier with flexible solutions to inlet drain requirements. Equal to our trench grating products, Standard Duty pedestrian grates and Heavy Duty vehicular grates are illustrated on page 46 of this catalog. Inlets may be specified to any clear opening by simply indicating the desired **"W"** (width) and **"S"** (span) dimensions illustrated on page 44. Similar to our trench grating systems, any of the five embed frame profiles may be specified to meet the exact needs of your application. Bolting the grates to the frames is optional and must be specified.

While all gratings are manufactured with plain walking surface, the optional serrated surface may be specified. The open ends of all inlet gratings are trench banded to enhance durability and allow for maximum drainage. Unless otherwise specified, all inlet grates and frames are hot dip galvanized in accordance with ASTM specification A-123.



How to Specify Inlet Grates & Frames

Inlet grates and frames are simply specified by using the following component model numbers:

H - 3624 - EZ (B)

Grating type from table on page 46. Specify Heavy Duty (type H, HA, or HP) or Standard Duty (type S, SA or SP)

Indicates frame "W" clear opening in inches (see page 44).

Indicates frame "S" clear opening in inches (see page 44).

Type of frame selected from sections illustrated on page 44.

Optional component to specify bolted grates. If bolted grates are not required, this suffix is omitted.

Standard Inlet Sets

Standard Inlet Sets listed in tabular form on page 49 consist of our **"E-Z Pour"** frames with either of two popular series of grating. Standard Duty type **"S"** grates are selected for pedestrian applications and type **"H"** Heavy Duty grates are selected for vehicular load applications.

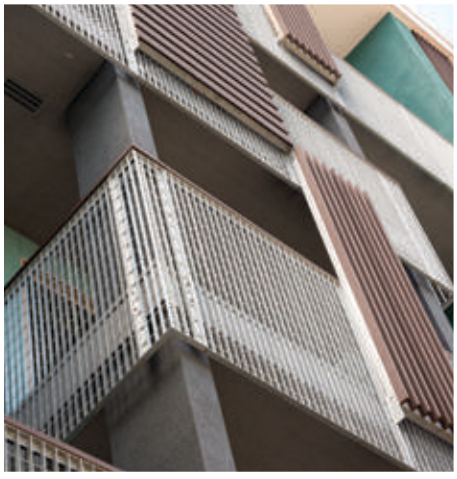
Any of the above Inlet Sets can be customized to meet the specific needs of your construction project. To select Standard Duty ADA conforming or close mesh gratings, simply substitute **"SA"** or **"SP"** in lieu of the **"S"** component in the model number. Heavy Duty models can be similarly modified by inserting **"HA"** or **"HP."** To select alternative frame construction, select the frame type from page 44 and replace component **"EZ"** in the model number. Bolted grates must be specified by adding the **"(B)"** suffix to the model number.

Coda Architectural® Products



Grating Pacific is proud to present Coda Architectural, a new and exciting collection of architectural products. Designed as a solution for infill panels, fences, trellises, sunscreens, and louvers, these products combine aesthetics with security and code compliance.

The Opus line represents the marquee offering from Coda Architectural. Infused with European design, these products provide a distinct yet complementary accent. Opus products are available in a series of square and rectangular patterns that serve as the foundation for any design. Panels are easily fabricated with contours, diagonals, and finish trim to build creative solutions that seamlessly blend with adjacent architecture. Finished in a variety of metallic and organic coatings, the panels provide an aesthetic solution to screening and fencing applications of all types.

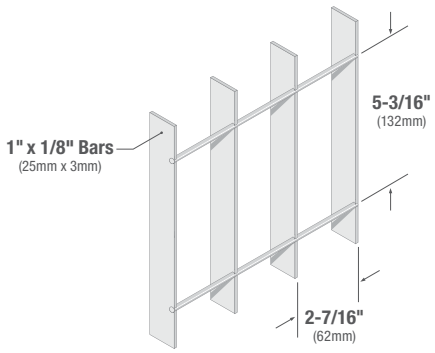
Visual elegance, distinct flexibility, expressive aspects . . . Coda Architectural®.

- Architectural, industrial and residential applications
- Timeless square and rectangular patterns
- Maximum design flexibility
- Discreet to prominent security
- Wide variety of finishes and colors

Opus10

The most widely used rectangular design, Opus10 features timeless lines combined with unmatched versatility. Opus10 is a cost-effective solution to fencing requirements providing a unique blend of security and aesthetics.

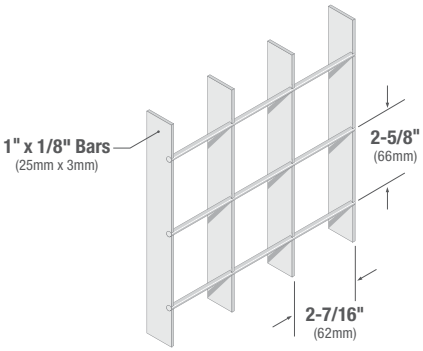
Weight Per Square Foot	
3mm Main Bar	**2.2#**/sq. ft.
2mm Main Bar	**1.6#**/sq. ft.



Opus20

The most popular square mesh pattern, Opus20 subtly suggests strength, rigidity, and security. This ideal solution for industrial and commercial applications provides a superior strength-to-weight ratio over other economical fencing products.

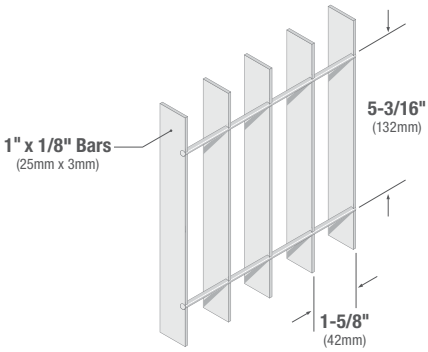
Weight Per Square Foot	
3mm Main Bar	**2.5#**/sq. ft.
2mm Main Bar	**1.8#**/sq. ft.



Opus30

The more closely spaced main elements of this classic design make Opus30 the perfect choice where increased visual blocking is preferred. The added strength and rigidity of the panel allows for more sturdy fences and enclosures.

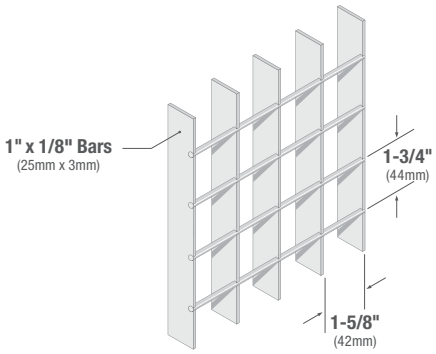
Weight Per Square Foot	
3mm Main Bar	**3.1#**/sq. ft.
2mm Main Bar	**2.2#**/sq. ft.

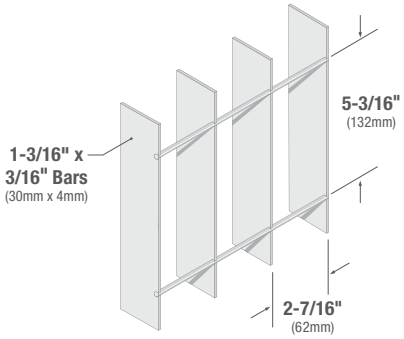


Opus40

The extremely rigid characteristics of the popular Opus40 design provide a closely spaced nominal square pattern with increased strength and security. Opus40 is ideally suited for shorter fences and infill panel requirements.

Weight Per Square Foot	
3mm Main Bar	**3.3#**/sq. ft.
2mm Main Bar	**2.4#**/sq. ft.

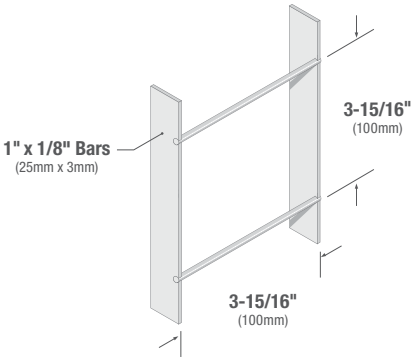




Opus50

Designed to provide increased depth and strength of the main elements, Opus50 incorporates a deeper bar section while maintaining the same timeless spacing pattern of the most popular Opus10 design.

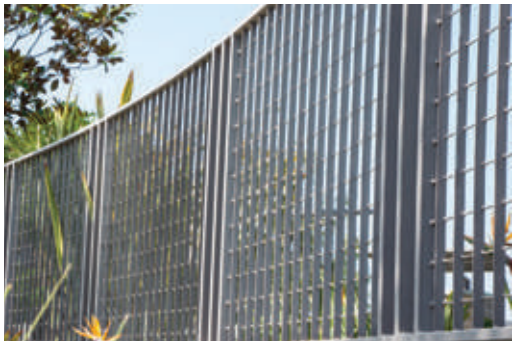
Weight Per Square Foot	
4mm Main Bar	**3.6#**/sq. ft.

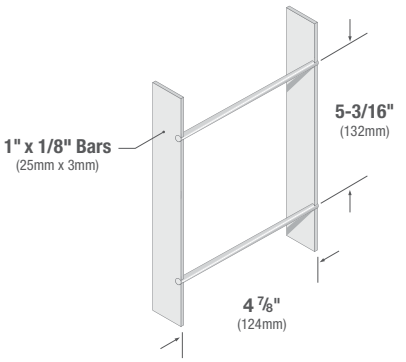


Opus60

The enduring square pattern of Opus60 complies with IBC spacing requirements for infill panels of all types. The open matrix minimizes visual obstruction while attractively maintaining security and code compliance.

Weight Per Square Foot	
3mm Main Bar	**1.2#**/sq. ft.
2mm Main Bar	**1.0#**/sq. ft.

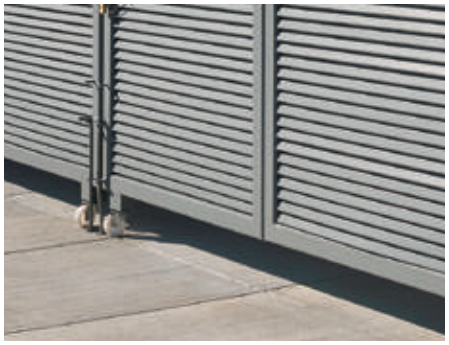




Opus70

Light and airy, the Opus70 design provides for a modular perimeter fence that blends into the background while providing a permanent physical barrier.

Weight Per Square Foot	
3mm Main Bar	**1.3#**/sq. ft.
2mm Main Bar	**1.0#**/sq. ft.



OpusGates

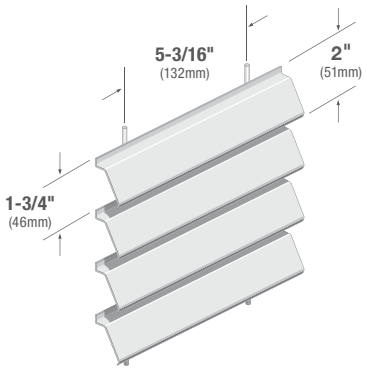
Coda Architectural is pleased to offer a complete array of fabricated OpusGates. Using any Opus grid or louvered pattern as the main visual element, gates are available in both standard and custom designs to complement adjacent fencing and architecture.

Coda Architectural Louvered Panels

Opus80

Louvered main elements make Opus80 the ideal panel for applications that require ventilation and minimal visual access. Opus80 provides a distinct look, with 80% visual concealment and 45% free air flow.

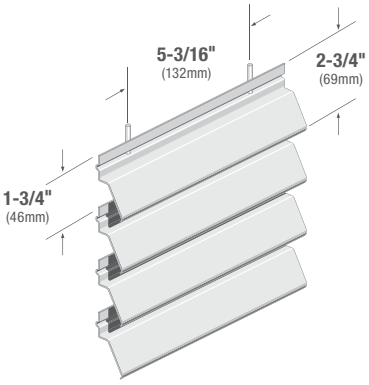
Weight Per Square Foot	
1/16" Louver	**3.0#**/sq. ft.



Opus100

Concealment and ventilation are merged with the Opus100 design. This stylish panel provides 100% concealment by combining louvered bars and permanently welded cross bars behind the panel.

Weight Per Square Foot	
1/16" Louver	**4.3#**/sq. ft.



Rail Options

Various cap rails are available for welding to the edge of the finished panel.
Rails may be bolted or welded to supporting structures to facilitate efficient field assembly.

Trim Band
Flat bar welded to end of panel. Often formed and punched for attachment.

Plate Band
Various widths of oversized flat bar may be welded to end of panel.

U-Edge
Steel plate formed and welded to the edge of the panel.

Mold Cap
Ornamental, mill rolled steel bar with a distinctive design welded to panel edge.

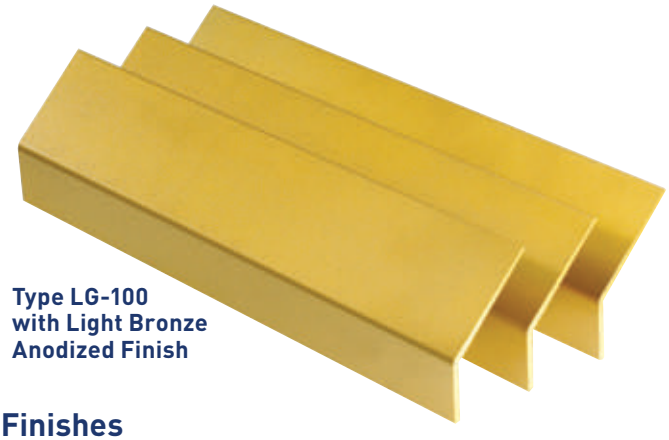
Tube Frame
Tubes of various sizes may be used to complement adjacent architecture.

Additional product information, application, accents, colors, finishes, and downloadable specifications for Coda Architectural Products can be found on our website: www.gratingpacific.com

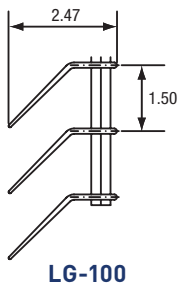
Aluminum Louver Grate

LG-Louver Series

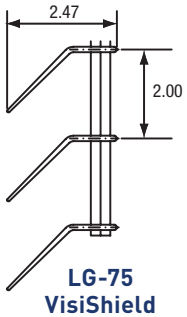
Manufactured from aluminum extrusions, LG series Louver Grate is designed to offer an economical solution for architectural applications. Available in four popular patterns with total or partial visual concealment, all LG series products offer a minimum 63% open air flow. Popular applications include sunscreens, visual barriers, security systems, and fencing.



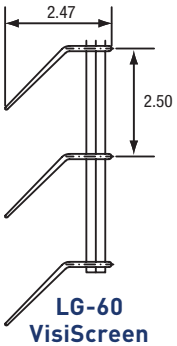
Type LG-100 with Light Bronze Anodized Finish



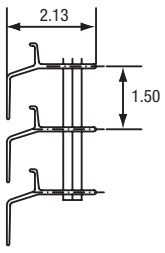
LG-100
VisiBlock
Open area 63%
Visual block 100%



LG-75
VisiShield
Open area 64%
Visual block 75%



LG-60
VisiScreen
Open area 64%
Visual block 60%



ZG-100
StormGuard
Rain resistant
Visual block 100%

Finishes

The natural corrosion resistance and beauty of mill finish aluminum can be enhanced with clear anodizing. Other popular anodizing options include light and dark bronze shades.

For an alternative appearance, powder coating, epoxy, and Kynar finishes are available in the complete RAL color palette. Properly applied, these finishes offer years of continuing service in colors designed to complement the look and feel of adjacent architecture.

Louver Grate Load Table

Part No.	Product	Weight (lbs. psf)	Sec. Prop. per ft. width Sx, in³ Ix, in⁴		Clear Span							
					5'-0"	6'-0"	7'-0"	8'-0"	9'-0"	10'-0"	11'-0"	12'-0"
LG-100	VisiBlock	3.6	1.017	U	325	226	166	127	100	81	67	57
			1.254	D	0.365	0.526	0.715	0.934	1.182	1.460	1.766	2.102
LG-75	VisiShield	2.8	0.773	U	247	172	180	97	76	62	51	43
			0.953	D	0.365	0.526	1.020	0.934	1.183	1.460	1.767	2.102
LG-60	VisiScreen	2.4	0.626	U	200	139	102	78	62	50	41	35
			0.773	D	0.364	0.525	0.714	0.933	1.181	1.458	1.764	2.099

U = uniform load in lbs./sq. ft.
D = deflection in inches

Note: Loads and deflections provided in this table are theoretical and are based on a unit stress of 12,000 psi.

VisiScreen panels placed vertically conceal rooftop mechanical systems.

Vertical & Horizontal Installation

The unique flexibility of the LG series allows architectural freedom for both vertical and horizontal applications. Vertical applications allow for maximum air flow and resist the accumulation of snow, rain, dirt, and debris. Screening of parking structures and visual concealment of unsightly ventilation or mechanical equipment is easily accomplished.

Installed horizontally, the multiple tilt patterns provide options for sunscreens and building facades. Once again the high percentage of open area allows for important air circulation and the free passage of moisture.

VisiShield panels placed horizontally provide solar protection at building entrance.

Fabrication

LG series products are easily fabricated to any size and configuration. Radial or diagonal cuts accommodate "free-form" design beyond simple squares and rectangles. Louvers can be welded into component framework and quickly bolted to the supporting structure with limited field labor. All fabrication can be completed prior to finishing thereby maximizing the integrity of the coating.

Louver Grate panels are a distinct and practical accent for building facades.

Architectural Applications

Grating Pacific's complete line of bar gratings and architectural products offer a distinct, contemporary design that is easily incorporated as an architectural accent. Increased spacing between the bearing bars provides security and structural integrity without restricting sight lines and ventilation. The perfect merger of form and function, these products can be fully fabricated to complement design creativity.

- Security
- Ventilation
- Fencing
- Handrail infill
- Sunscreens
- Architectural accents

Type "W" welded steel grating fence panels

Type "SGF" accent screen

Type "SG" aluminum panels installed as radial accent

Type "SL" ground floor security/ventilation screen

Type "DT" handrail infill panels

Architectural Patterns

24-x-4		Bearing Bars @ 1-1/2" O.C. Cross Bars @ 4" O.C.
30-x-4		Bearing Bars @ 1-7/8" O.C. Cross Bars @ 4" O.C.
32-x-4		Bearing Bars @ 2" O.C. Cross Bars @ 4" O.C.
38-x-4		Bearing Bars @ 2-3/8" O.C. Cross Bars @ 4" O.C.
40-x-4		Bearing Bars @ 2-1/2" O.C. Cross Bars @ 4" O.C.
44-x-4		Bearing Bars @ 2-3/4" O.C. Cross Bars @ 4" O.C.
48-x-4		Bearing Bars @ 3" O.C. Cross Bars @ 4" O.C.
64-x-4		Bearing Bars @ 4" O.C. Cross Bars @ 4" O.C.

Each product is available in steel, aluminum, or stainless steel, assembled by any of the manufacturing methods presented on page 2 of this catalog.
To specify the appropriate material and manufacturing method, replace the "x" in the above part number with any of the following designations:

For Steel Products
- **"W"** for Welded Grating
- **"DT"** for Dovetail Pressure Locked
- **"SL"** for Swage Locked

For Aluminum Products
- **"SG"** for Swage Locked
- **"ADT"** for Dovetail Pressure Locked
- **"SGI"** for Swaged I-Bar
- **"SGF"** for Swaged Flush Top

For Stainless Steel Products
- **"WS"** for Welded Grating
- **"DTS"** for Dovetail Pressure Locked
- **"SLS"** for Swage Locked

Bearing Bar Sizes

Select from the following range of bearing bars:

1" x 1/8"	1" x 3/16"
1-1/4" x 1/8"	1-1/4" x 3/16"
1-1/2" x 1/8"	1-1/2" x 3/16"
1-3/4" x 1/8"	1-3/4" x 3/16"
2" x 1/8"	2" x 3/16"
	2-1/4" x 3/16"
	2-1/2" x 3/16"
	3" x 3/16"

Contact Grating Pacific for additional custom products including:

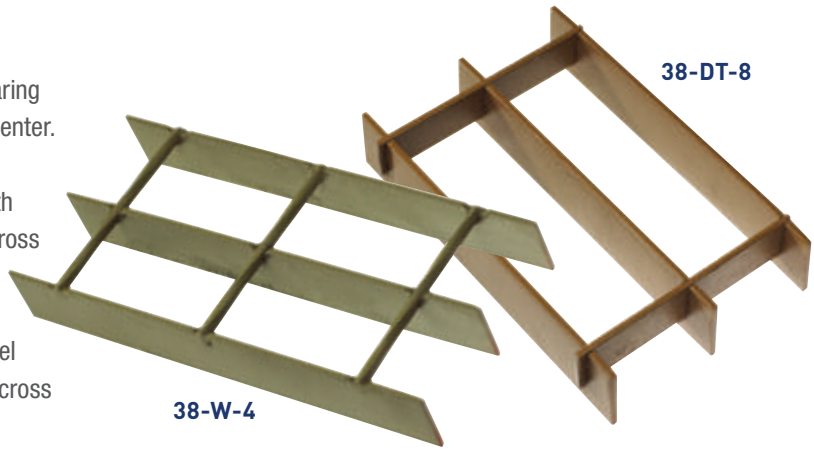
- Additional bearing bar sizes and spacings
- Additional cross bar spacings
- Full-depth rectangular cross bars
- Special fabrication and finishing

Sample specifications:

32-W-4 1 x 1/8 for welded steel with 1" x 1/8" bearing bars at 2" on center and welded cross bars at 4" on center.

40-ADT-4 1-1/2 x 3/16 for dovetail aluminum with 1-1/2" x 3/16" bearing bars at 2-1/2" on center and cross bars at 4" on center.

38-SLS-4 2 x 3/16 for swage locked stainless steel with 2" x 3/16" bearing bars at 2-3/8" on center and cross bars at 4" on center.

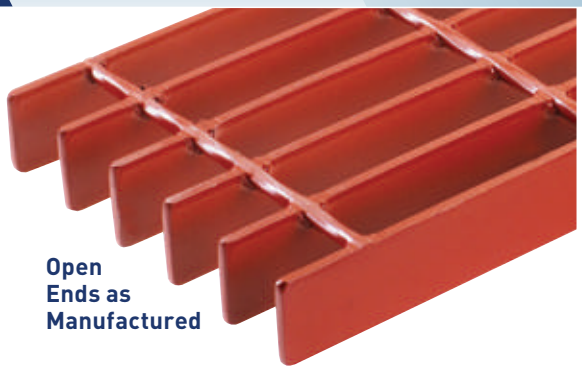


Banding & Panel Layout

Banding

As manufactured, grating panels are provided with open ends. Optional trim banding, a metal flat bar welded to the open ends of the panel, provides additional transverse stiffness and a finished architectural appearance. Banding should be specified for all removable grating panels as the closed ends provide additional worker safety during handling.

Gratings subject to vehicular loads should always be specified as banded. In these applications, the band bar helps reduce impact stresses by transferring loads to adjacent bearing bars and resists deformation caused by repetitive traffic patterns on open end gratings.



Open Ends as Manufactured

Load banding, where each bearing bar is welded to the band bar, helps distribute load throughout the grating panel.

Trench banding, where the band bar is elevated above the bottom of the bearing bars, is appropriate for drainage applications. The elevated band bar allows for efficient drainage and will not trap liquids between the band bar and the grating support.

See Banding Weld Standards for specific welding practices.

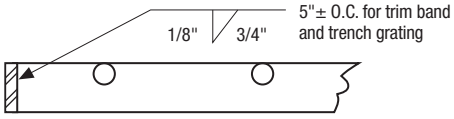
Standard Trim Banding

Trench Banding

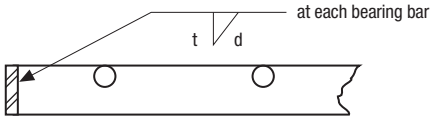
Banding Weld Standards

For grating with bearing bars less than 2-1/2" deep:

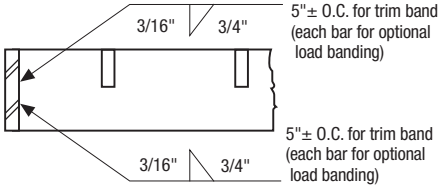
Standard Trim Banding



Load Banding (Optional)

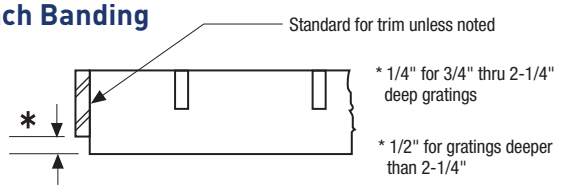


For grating with bearing bars 2-1/2" and deeper:



NOTE: Weld one side at top of bearing bar – opposite side at bottom, or weld one side only and exceed one-half the overall depth.

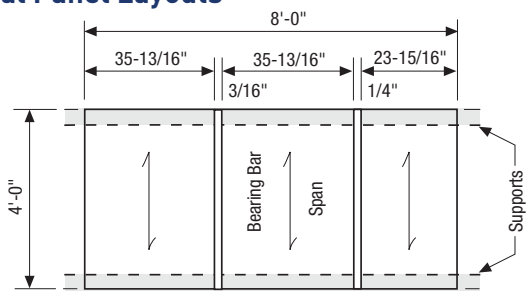
Trench Banding

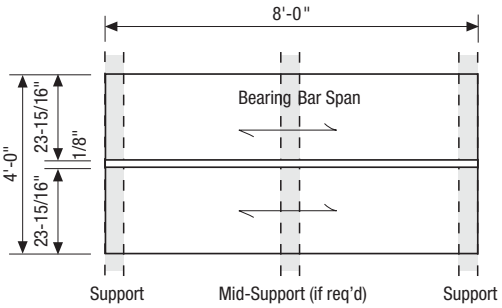


Panel Layout

Stock grating panels are manufactured in nominal 24", 36", and 48" widths. These sizes allow for efficient layout and waste minimization when fabricated to your exact specification. Unlike competing grating products, individual grating panels do not require supports on all four sides of each cut piece. Bar grating panels only require support perpendicular to the bearing bar span. There is no need to place supports parallel to the bearing bars where adjacent panels are installed in succession. The following diagrams illustrate proper layout and support of a simple bar grating platform.

Typical Panel Layouts





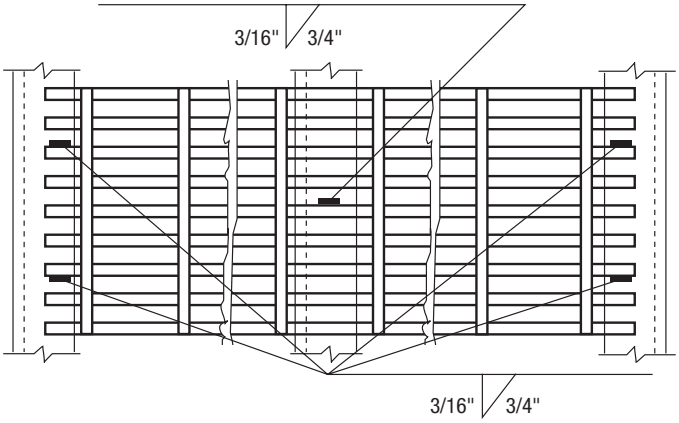
Welded Installation

All grating must be firmly fastened in place and welding panels to the supporting structure provides a superior, permanent installation. The diagram to the right indicates the recommended minimum weld size and spacing for pedestrian applications.

Vehicular applications typically require additional welding, size and spacing as determined by the specifying authority.

Minimum Weld Pattern

One weld in middle of panel at each intermediate support



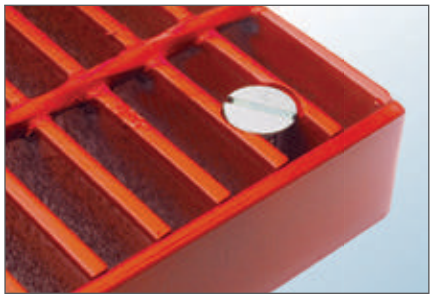
Welds at ends of bearing bar approximately 6 inches from each side of panel

Fasteners

When the grating is designed to be removable or when welding is not practical, consider the mechanical fasteners below. The minimum fastener spacing for pedestrian applications is equal to the minimum weld pattern illustrated above.

Saddle Clips

Bent clips bridging two bearing bars, available in galvanized steel, stainless steel, or aluminum. Standard bolt holes are 5/16" and bolts, screws, or other connecting hardware shall be supplied by others.



Countersunk Lands

The narrow spacing of close mesh gratings allows for countersinking or milling of the bearing bars to support bolt shoulders. Flat head screws or self-drilling fasteners shall be supplied by others.

Weld Lugs

Plates punched with holes and shop welded between the bearing bars facilitate bolting to the supporting structure. Bolts, screws, or other connecting hardware shall be supplied by others.

"G" Clips

Mechanical fasteners that are installed on the top surface of the grating and create a friction connection with the flange supporting the panel. "G" Clips are easily installed without drilling or welding.

"J" Clips

Bent clip capturing one bearing bar, frequently used with 11/16" on center bearing bars. Cap screws or other fastening hardware shall be supplied by others.

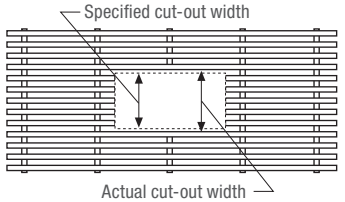
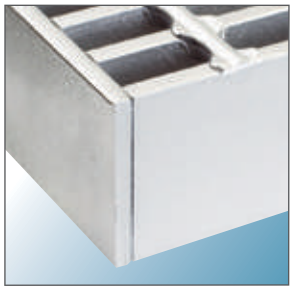
Cut-Outs Made to Closest Adjacent Bearing Bars



Anchor – A device by which grating is attached to its supports.

Band – A flat bar welded to the end of a grating panel, or along the side of a cutout, and extending neither above nor below the bearing bars.
Load Carrying Band: A band used to transfer load between bearing bars.
Trim Band: A band which carries no load, used primarily for appearance and closing open ends.



Bearing Bars – Load carrying main elements made from steel, aluminum, or stainless steel, extending in the direction of the grating span.

Bearing Bar Centers – The distance center-to-center of the bearing bars.

Carriers – Flats or angles which are welded to the grating panel and nosing of a stair tread and are bolted to a stair stringer to support the tread.

Clear Opening – The distance between faces of bearing bars in rectangular gratings, or between a bent connecting bar and a bearing bar in a riveted grating.

Cross Bars – The connecting bars which extend across the bearing bars, usually perpendicular to them. They may be bent into a corrugated or sinuous pattern and, where they intersect the bearing bars, are welded, forged or mechanically locked to them.

Cross Bar Centers – The distance center-to-center of the cross bars.

Curved Cut – A cutout following a curved pattern.

Cutout – An area of grating removed to clear an obstruction or to permit pipes, ducts, columns, etc. to pass through the grating.

Electro-Forged – A process of combining hydraulic pressure and heat fusion to forge bearing bars and cross bars into a panel grid.

Finish – The coating, commonly paint or galvanizing, which is applied to the grating.

Flush-Top Grating – A type of pressure-locked grating in which the cross bars and bearing bars are in the same plane relative to the top surface of the grating.

Grating – An open grid assembly of metal bars, in which the bearing bars, running in one direction, are spaced by rigid attachment to cross bars running perpendicular to them or by bent connecting bars extending between them.

Hinged Panel – Grating panels which are hinged to their supports or to other grating parts.

I-Bar – An extruded aluminum bearing bar having a cross sectional shape of the letter "I". (Commonly with a striated walking surface)

Length – Refer to Span of Grating

Load Carrying Band – see Band

Nosing – A special "L" section member serving as the front or leading edge of a stair tread, or of grating at the head of a stair.

Pressure Locked Grating – Bearing bars are locked in position by cross bar deformation instead of riveting or welding. Several proven methods include:

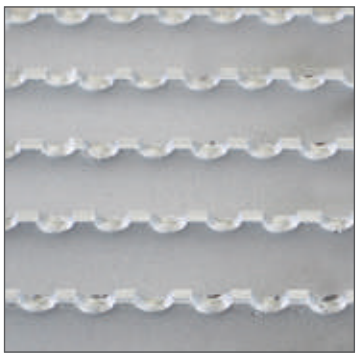
- Expansion of an extruded or drawn tubular cross bar
- Extruded cross bar deformed or swaged between bearing bars
- Press assembly of rectangular cross bars into slotted bearing bars

Radially Cut Grating – Rectangular grating which is cut into panels shaped as annular segments, for use in circular or annular areas.

Reticuline Bar – A sinuously bent connecting bar extending between two adjacent bearing bars, alternately contacting and being riveted to each.

Rivet Centers – The distance center-to-center of rivets along one bearing bar.

Riveted Grating – Grating composed of straight bearing bars and bent connecting bars, which are joined at their contact points, by riveting.



Serrated Grating – Grating which has the top surfaces of the bearing bars or cross bars, or both, notched.

Span of Grating – The distance between points of grating support, or the dimension of the bearing bars in this direction.

Straight Cut – Portion of the cut edge or cutout of a grating which follows a straight line.

Swaging – A method of altering the cross-section shape of a metal bar by pressure applied through dies.

Toe Plate – A flat bar attached against the outer edge of a grating or rear edge of a tread, and projecting above the top surface of the grating or tread to form a lip or curb.

Tread – A panel of grating having carriers and a nosing attached by welding, and designed specifically to serve as a stair tread.

Trim Band – see Band

Welded Grating – Grating in which the bearing bars and cross bars are joined at their intersections by either electro-forging or conventional hand welding.

Width – The overall dimension of a grating panel, measured perpendicular to the bearing bars, and in the same direction as the cross bars.

Service. Quality. Reliability.
